Statement of Principles
concerning
ISCHAEMIC HEART DISEASE

Instrument No. 90 of 2007 as amended
made under section 196B(3) of the

Veterans' Entitlements Act 1986

This compilation was prepared on 7 April 2014 taking into account Amendment Statement of Principles concerning ISCHAEMIC HEART DISEASE (Instrument No. 34 of 2014).

Prepared by the Repatriation Medical Authority Secretariat, Brisbane.
Statement of Principles

concerning

ISCHAEMIC HEART DISEASE

No. 90 of 2007

for the purposes of the

Veterans’ Entitlements Act 1986
and

Military Rehabilitation and Compensation Act 2004

Title

1. This Instrument may be cited as Statement of Principles concerning ischaemic heart disease No. 90 of 2007.

Determination

2. The Repatriation Medical Authority under subsection 196B(3) and (8) of the Veterans’ Entitlements Act 1986 (the VEA):

(a) revokes Instrument No. 54 of 2003, as amended by Instrument No. 10 of 2004, concerning ischaemic heart disease; and

(b) determines in their place this Statement of Principles.

Kind of injury, disease or death

3. (a) This Statement of Principles is about ischaemic heart disease and death from ischaemic heart disease.

(b) For the purposes of this Statement of Principles, "ischaemic heart disease" means a cardiac disability characterised by insufficient blood flow to the muscle tissue of the heart due to atherosclerosis, thrombosis or vasospasm of the coronary arteries.

(c) Ischaemic heart disease attracts ICD-10-AM code in the range I20 to I25.

(d) In the application of this Statement of Principles, the definition of "ischaemic heart disease" is that given at paragraph 3(b) above.

Basis for determining the factors

4. On the sound medical-scientific evidence available, the Repatriation Medical Authority is of the view that it is more probable than not that ischaemic heart disease and death from ischaemic heart disease can be related to relevant service rendered by veterans or members of the Forces under the VEA, or
members under the *Military Rehabilitation and Compensation Act 2004* (the MRCA).

**Factors that must be related to service**

5. Subject to clause 7, at least one of the factors set out in clause 6 must be related to the relevant service rendered by the person.

**Factors**

6. The factor that must exist before it can be said that, on the balance of probabilities, **ischaemic heart disease** or **death from ischaemic heart disease** is connected with the circumstances of a person’s relevant service is:

   (a) having hypertension before the clinical onset of ischaemic heart disease; or

   (b) having diabetes mellitus before the clinical onset of ischaemic heart disease; or

   (c) being obese for at least five years within the 15 years before the clinical onset of ischaemic heart disease; or

   (d) for males, having a waist to hip circumference ratio exceeding 1.0 for at least five years within the 15 years before the clinical onset of ischaemic heart disease; or

   (e) for females, having a waist to hip circumference ratio exceeding 0.9 for at least five years within the 15 years before the clinical onset of ischaemic heart disease; or

   (f) having dyslipidaemia before the clinical onset of ischaemic heart disease; or

   (g) where smoking has ceased prior to the clinical onset of ischaemic heart disease:

      (i) smoking at least one pack year but less than five pack years of cigarettes or the equivalent thereof in other tobacco products, and the clinical onset of ischaemic heart disease has occurred within three years of smoking cessation; or

      (ii) smoking at least five pack years of cigarettes or the equivalent thereof in other tobacco products, and the clinical onset of ischaemic heart disease has occurred within five years of smoking cessation; or

   (h) where smoking has not ceased prior to the clinical onset of ischaemic heart disease:

      (iii) smoking an average of at least five cigarettes per day or the equivalent thereof in other tobacco products, for at least the one year before the clinical onset of ischaemic heart disease; or

      (iv) smoking at least one pack year of cigarettes or the equivalent thereof in other tobacco products, before the clinical onset of ischaemic heart disease; or
being in an atmosphere with a visible tobacco smoke haze in an enclosed space for at least 10 000 hours before the clinical onset of ischaemic heart disease, where the last exposure to that atmosphere did not occur more than five years before the clinical onset of ischaemic heart disease; or

an inability to undertake any physical activity greater than three METs for at least the seven years before the clinical onset of ischaemic heart disease; or

having chronic renal disease before the clinical onset of ischaemic heart disease; or

having hypothyroidism before the clinical onset of ischaemic heart disease; or

having clinically significant depressive disorder for at least five years, before the clinical onset of ischaemic heart disease; or

undergoing a course of therapeutic radiation involving the mediastinum or the chest wall region overlying the heart before the clinical onset of ischaemic heart disease; or

using a drug belonging to the non-steroidal anti-inflammatory class of drugs, excluding aspirin, paracetamol and topical non-steroidal anti-inflammatory drugs, for a continuous period of at least seven days before the clinical onset of ischaemic heart disease, where the last dose of the drug was taken within the seven days before the clinical onset of ischaemic heart disease; or

for angina, acute myocardial infarction or sudden death from ischaemic heart disease only:

(i) experiencing a category 1A stressor within the 24 hours before the clinical onset of ischaemic heart disease; or
(ii) experiencing a category 1B stressor within the 24 hours before the clinical onset of ischaemic heart disease; or
(iii) experiencing the death of a significant other within the six months before the clinical onset of ischaemic heart disease; or
(iv) having a clinically significant anxiety spectrum disorder as specified, at the time of the clinical onset of ischaemic heart disease; or

for acute myocardial infarction only, having an episode of acute cholinergic poisoning from exposure to an organophosphorus ester within the 14 days before the clinical onset of ischaemic heart disease; or

for acute myocardial infarction or sudden death from ischaemic heart disease only, undertaking physical activity of six METs or more within the 12 hours before the clinical onset of ischaemic heart disease; or

having hypertension before the clinical worsening of ischaemic heart disease; or

having diabetes mellitus before the clinical worsening of ischaemic heart disease; or
(s) being obese for at least five years within the 15 years before the clinical worsening of ischaemic heart disease; or

(t) for males, having a waist to hip circumference ratio exceeding 1.0 for at least five years within the 15 years before the clinical worsening of ischaemic heart disease; or

(u) for females, having a waist to hip circumference ratio exceeding 0.9 for at least five years within the 15 years before the clinical worsening of ischaemic heart disease; or

(v) having dyslipidaemia before the clinical worsening of ischaemic heart disease; or

(w) where smoking has ceased prior to the clinical worsening of ischaemic heart disease:

   (i) smoking at least one pack year but less than five pack years of cigarettes or the equivalent thereof in other tobacco products, and the clinical worsening of ischaemic heart disease has occurred within three years of smoking cessation; or

   (ii) smoking at least five pack years of cigarettes or the equivalent thereof in other tobacco products, and the clinical worsening of ischaemic heart disease has occurred within five years of smoking cessation; or

(x) where smoking has not ceased prior to the clinical worsening of ischaemic heart disease:

   (i) smoking an average of at least five cigarettes per day or the equivalent thereof in other tobacco products, for at least the one year before the clinical worsening of ischaemic heart disease; or

   (ii) smoking at least one pack year of cigarettes or the equivalent thereof in other tobacco products, before the clinical worsening of ischaemic heart disease; or

(y) being in an atmosphere with a visible tobacco smoke haze in an enclosed space for at least 10 000 hours before the clinical worsening of ischaemic heart disease, where the last exposure to that atmosphere did not occur more than five years before the clinical worsening of ischaemic heart disease; or

(z) an inability to undertake any physical activity greater than three METs for at least the seven years before the clinical worsening of ischaemic heart disease; or

(aa) having chronic renal disease before the clinical worsening of ischaemic heart disease; or

(bb) having hypothyroidism before the clinical worsening of ischaemic heart disease; or

(cc) having clinically significant depressive disorder for at least five years, before the clinical worsening of ischaemic heart disease; or

(dd) undergoing a course of therapeutic radiation involving the mediastinum or the chest wall region overlying the heart, before the clinical worsening of ischaemic heart disease; or
using a drug belonging to the non-steroidal anti-inflammatory class of
drugs, excluding aspirin, paracetamol and topical non-steroidal anti-
inflammatory drugs, for a continuous period of at least seven days
before the clinical worsening of ischaemic heart disease, where the last
dose of the drug was taken within the seven days before the clinical
worsening of ischaemic heart disease; or

for angina, acute myocardial infarction or sudden death from ischaemic
heart disease only:

(i) experiencing a category 1A stressor within the 24 hours before
the clinical worsening of ischaemic heart disease; or

(ii) experiencing a category 1B stressor within the 24 hours before
the clinical worsening of ischaemic heart disease; or

(iii) experiencing the death of a significant other within the six
months before the clinical worsening of ischaemic heart
disease; or

(iv) having a clinically significant anxiety spectrum disorder as
specified, at the time of the clinical worsening of ischaemic
heart disease; or

for acute myocardial infarction only, having an episode of acute
cholinergic poisoning from exposure to an organophosphorus ester
within the 14 days before the clinical worsening of ischaemic heart
disease; or

for acute myocardial infarction or sudden death from ischaemic heart
disease only, undertaking physical activity of six METs or more within
the 12 hours before the clinical worsening of ischaemic heart disease;
or

inability to obtain appropriate clinical management for ischaemic heart
disease.

Factors that apply only to material contribution or aggravation

7. Paragraphs 6(q) to 6(gg) apply only to material contribution to, or aggravation
of, ischaemic heart disease where the person’s ischaemic heart disease was
suffered or contracted before or during (but not arising out of) the person’s
relevant service.

Inclusion of Statements of Principles

8. In this Statement of Principles if a relevant factor applies and that factor
includes an injury or disease in respect of which there is a Statement of
Principles then the factors in that last mentioned Statement of Principles apply
in accordance with the terms of that Statement of Principles as in force from
time to time.

Other definitions

9. For the purposes of this Statement of Principles:

"a category 1A stressor" means one or more of the following severe
traumatic events:
(a) experiencing a life-threatening event;
(b) being subject to a serious physical attack or assault including rape and sexual molestation; or
(c) being threatened with a weapon, being held captive, being kidnapped, or being tortured;

"a category 1B stressor" means one of the following severe traumatic events:
(a) being an eyewitness to a person being killed or critically injured;
(b) viewing corpses or critically injured casualties as an eyewitness;
(c) being an eyewitness to atrocities inflicted on another person or persons;
(d) killing or maiming a person; or
(e) being an eyewitness to or participating in, the clearance of critically injured casualties;

"a clinically significant anxiety spectrum disorder as specified" means one of the following disorders:
(a) anxiety disorder due to a general medical condition;
(b) generalised anxiety disorder;
(c) panic disorder;
(d) phobic anxiety;
(e) posttraumatic stress disorder; or
(f) anxiety disorder not otherwise specified,

that attract a diagnosis under DSM-IV-TR and is sufficient to warrant ongoing management. The ongoing management may involve regular visits (for example, at least monthly), to a psychiatrist, clinical psychologist or general practitioner;

"a course of therapeutic radiation" means one or more fractions (treatment portions) of ionising radiation administered with the aim of achieving palliation or cure with gamma rays, x-rays, alpha particles or beta particles;

"a significant other" means a person who has a close family bond or a close personal relationship and is important or influential in one’s life;

"acute cholinergic poisoning" means symptoms and signs due to the inhibition of acetylcholinesterase enzyme activity which occur within the 24 hours following exposure. These symptoms and signs are: acute paralysis, overwhelming bronchial secretions, bradycardia, gastrointestinal distress, miosis, lacrimation or diarrhoea;

"an eyewitness" means a person who observes an incident first hand and can give direct evidence of it. This excludes a person exposed only to media coverage of the incident;

"an organophosphorus ester" means an agent used to inhibit acetylcholinesterase, and includes the organophosphate pesticides chlorpyrifos, dichlorvos, EPN (ethyl p-nitrophenyl theonobenzeneephosphonate), leptophos, methamidophos, mipafox (diisopropyl phosphorofluoridate), omethoate, parathion, TOCP (tri-ortho-cresyl phosphate), trichlorfon and trichlornat;
"being obese" means an increase in body weight by way of fat accumulation which results in a Body Mass Index (BMI) of thirty or greater.

The BMI = W/H^2 and where:
W is the person’s weight in kilograms and
H is the person’s height in metres;

"chronic renal disease" means irreversible kidney damage which leads to impaired renal function;

"cigarettes per day or the equivalent thereof in other tobacco products" means either cigarettes, pipe tobacco or cigars, alone or in any combination where one tailor made cigarette approximates one gram of tobacco; or one gram of cigar, pipe or other smoking tobacco;

"clinically significant" means sufficient to warrant ongoing management, which may involve regular visits (for example, at least monthly), to a psychiatrist, counsellor or general practitioner;

"death from ischaemic heart disease" in relation to a person includes death from a terminal event or condition that was contributed to by the person’s ischaemic heart disease;

"dyslipidaemia" generally means evidence of a persistently abnormal lipid profile after the accurate evaluation of serum lipids following a 12 hour overnight fast, and estimated on a minimum of two occasions as a:

(a) total serum cholesterol level greater than or equal to 5.5 mmol/L; or
(b) serum triglyceride level greater than or equal to 2.0 mmol/L; or
(c) having a high density lipoprotein cholesterol level less than 1.0 mmol/L;

"hypothyroidism" means a disease state characterised by a reduction in circulating thyroid hormones;

"ICD-10-AM code" means a number assigned to a particular kind of injury or disease in The International Statistical Classification of Diseases and Related Health Problems, 10th revision, Australian Modification (ICD-10-AM), Fifth Edition, effective date of 1 July 2006, copyrighted by the National Centre for Classification in Health, Sydney, NSW, and having ISBN 1 86487 772 3;

"MET" means a unit of measurement of the level of physical exertion. 1 MET = 3.5 ml of oxygen/kg of body weight per minute or, 1.0 kcal/kg of body weight per hour, or resting metabolic rate;

"pack year of cigarettes or the equivalent thereof in other tobacco products" means a calculation of consumption where one pack year of cigarettes equals twenty tailor made cigarettes per day for a period of one calendar year, or 7300 cigarettes. One tailor made cigarette approximates one gram of tobacco or one gram of cigar or pipe tobacco by weight. One pack year of tailor made cigarettes equates to 7300 cigarettes, or 7.3 kg of
smoking tobacco by weight. Tobacco products means either cigarettes, pipe tobacco or cigars smoked, alone or in any combination;

"pack years of cigarettes or the equivalent thereof in other tobacco products" means a calculation of consumption where one pack year of cigarettes equals twenty tailor made cigarettes per day for a period of one calendar year, or 7300 cigarettes. One tailor made cigarette approximates one gram of tobacco or one gram of cigar or pipe tobacco by weight. One pack year of tailor made cigarettes equates to 7300 cigarettes, or 7.3 kg of smoking tobacco by weight. Tobacco products means either cigarettes, pipe tobacco or cigars smoked, alone or in any combination;

"panic attack" means a discrete period of intense fear or discomfort, in which four (or more) of the following symptoms developed abruptly and reached a peak within 10 minutes:

(a) palpitations, pounding heart, or accelerated heart rate;
(b) sweating;
(c) trembling or shaking;
(d) sensations of shortness of breath or smothering;
(e) feeling of choking;
(f) chest pain or discomfort;
(g) nausea or abdominal distress;
(h) feeling dizzy, unsteady, light headed or faint;
(i) derealisation (feelings of unreality) or depersonalisation (being detached from oneself);
(j) fear of losing control or going crazy;
(k) fear of dying;
(l) paraesthesias (numbness or tingling sensations); or
(m) chills or hot flushes.

This definition is derived from DSM-IV-TR;

"phobic anxiety" means a psychiatric condition which significantly limits an individual’s normal routine, occupational and social activities by excessive or unreasonable persistent fears brought on by the presence or anticipation of certain situations or objects. The exposure to the stimulus invariably provokes an immediate anxiety response such as a panic attack and the response is recognised as being excessive or unreasonable by the affected individual. This definition includes the diagnoses agoraphobia, social phobia or a specific phobia as derived from DSM-IV-TR;

"relevant service" means:

(a) eligible war service (other than operational service) under the VEA; or
(b) defence service (other than hazardous service) under the VEA; or
(c) peacetime service under the MRCA;

"terminal event" means the proximate or ultimate cause of death and includes:

(a) pneumonia;
(b) respiratory failure;
(c) cardiac arrest;
(d) circulatory failure; or
(e) cessation of brain function.

Application
10. This Instrument applies to all matters to which section 120B of the VEA or section 339 of the MRCA applies.

Date of effect
11. This Instrument takes effect from 19 September 2007.
Notes to Statement of Principles concerning ischaemic heart disease (Instrument No. 90 of 2007)

The Statement of Principles concerning ischaemic heart disease (Instrument No. 90 of 2007) in force under section 196B(3) of the Veterans’ Entitlements Act 1986, as shown in this compilation is amended as indicated in the Tables below.
