

Explanatory Statement

Income Tax: Alternative method for calculating the tax free component and taxable component of a superannuation benefit paid during the 2022–23 financial year for recipients of certain pensions under the *Defence Force Retirement and Death Benefits Act 1973* and the Trust Deed referred to in section 4 of the *Military Superannuation and Benefits Act 1991*

General outline of instrument

1. This instrument is made under subsection 307-125(5) of the *Income Tax Assessment Act 1997* (ITAA 1997).
2. It specifies an alternative method for calculating the tax free component and taxable component of a superannuation benefit paid during the 2022–23 financial year that is a superannuation lump sum under section 307-125 of the ITAA 1997. More specifically, it applies to certain pensions paid under:
 - a. the *Defence Force Retirement and Death Benefits Act 1973* (DFRDB Act), and
 - b. the Military Superannuation and Benefits Rules (MSBS Rules) set out in the Schedule to the Trust Deed as referred to in section 4 of the *Military Superannuation and Benefits Act 1991*.
3. The instrument is a legislative instrument for the purposes of the *Legislation Act 2003*.
4. Under subsection 33(3) of the *Acts Interpretation Act 1901*, where an Act confers a power to make, grant or issue any instrument of a legislative or administrative character (including rules, regulations or by-laws) the power shall be construed as including a power exercisable in the like manner and subject to the like conditions (if any) to repeal, rescind, revoke, amend, or vary any such instrument.

Date of effect

5. This instrument commences on the day after it is registered on the Federal Register of Legislation.
6. The instrument applies to pensions set out in section 4 that are paid under the DFRDB Act and MSBS Rules during the 2022–23 financial year and, following the decision in *Commissioner of Taxation v Douglas* [2020] FCAFC 220 (*Douglas*), are superannuation lump sum benefits.
7. The instrument will have retrospective application to any payments in the 2022-23 financial year that were made before it commences.
8. The instrument continues the alternative method of calculation that was previously provided for affected payments made:
 - a. before 1 July 2021, in the legislative instrument F2021L00901 – *Income Tax: Pre-1 July 2021 alternative method for calculating the tax free component and taxable*

component of a superannuation benefit for recipients of certain pensions under the Defence Force Retirement and Death Benefits Act 1973 and the Trust Deed referred to in section 4 of the Military Superannuation and Benefits Act 1991 registered on 30 June 2021, and

- b. during the 2021–22 financial year, in the legislative instrument F2022L00004 – *Income Tax: Alternative method for calculating the tax free component and taxable component of a superannuation benefit paid during the 2021–22 financial year for recipients of certain pensions under the Defence Force Retirement and Death Benefits Act 1973 and the Trust Deed referred to in section 4 of the Military Superannuation and Benefits Act 1991 registered on 4 January 2022.*

These instruments have been repealed however they still apply to the relevant periods. That is, instrument F2021L00901 continues to apply to superannuation benefits paid between 1 July 2007 and 30 June 2021. Similarly, F2022L00004 continues to apply to superannuation benefits paid between 1 July 2021 and 30 June 2022. This instrument applies to superannuation benefits paid between 1 July 2022 and 30 June 2023.

9. Without these instruments, the tax free component and taxable component of relevant payments would need to have been recalculated for each payment made before 30 June 2022, with the tax free component being reduced after each payment. This would potentially have increased the amount of tax payable by the recipient. This instrument allows that approach to continue for superannuation benefits paid during the 2022–23 financial year.

10. Under subsection 12(2) of the *Legislation Act 2003*, the retrospective application of this instrument does not adversely affect the rights or liabilities of any person other than the Commonwealth.

Effect of the instrument

11. The instrument specifies an alternative method to the method set out under paragraph 307-125(3)(b) of the ITAA 1997 for calculating the tax free component and taxable component of a superannuation lump sum.

12. This instrument applies to superannuation benefits that are superannuation lump sums paid during the 2022–23 financial year from:

- a. invalidity pensions paid under the DFRDB Act and MSBS Rules that commenced on or after 20 September 2007,
- b. reversionary pensions paid after the death of an invalidity pensioner under the DFRDB Act and MSBS Rules where the original invalidity pension commenced on or after 20 September 2007,
- c. non-reversionary pensions paid after the death of an invalidity pensioner under the DFRDB Act that commenced on or after 20 September 2007.

13. The alternative method specified in this instrument requires each superannuation benefit paid under the pension to be taken to have the same tax free component and taxable component proportions to the superannuation interest that supports the pension. These proportions are to be determined when the pension commenced (consistent with the rules that apply to superannuation income streams). That is, the proportions do not need to be determined before each payment is made, which is the normal rule for superannuation lump sum payments.

14. In effect, the alternative method will result in a tax free component proportion for a superannuation benefit (that is a superannuation lump sum payment following the *Douglas* decision) that is the same as it would have been if it was a superannuation income stream benefit payment (as it was treated prior to the *Douglas* decision).

Example

15. Charlotte is a member of the Military Superannuation and Benefits Scheme. She leaves the armed forces on 1 September 2022 and starts to receive an invalidity pension from the MSBS on 1 November 2022.
16. At the time the pension commenced the amount of the tax free component was \$10,000, and the superannuation interest that supported the pension was valued at \$100,000.
17. Charlotte received her first superannuation benefit of \$100 from the pension on 15 November 2022. Following the *Douglas* decision, this payment is to be taxed as a superannuation lump sum. Using the alternative method specified in this instrument, the tax free component of the benefit is determined by multiplying the amount of the benefit by the proportion of the tax free component of the interest determined at the time the pension commenced.
18. At the time the pension commenced the amount of the tax free component of the interest was 10% of the value of the interest (\$10,000 of the \$100,000). This means each benefit paid between the time the pension commenced and 1 July 2023 will comprise a tax free component equal to 10% of the benefit. The taxable component of each benefit will be equal to the amount of the benefit less the tax free component.
19. As the superannuation benefit paid on 15 November 2022 was \$100, the tax free component of the benefit is \$10. The taxable component of the superannuation benefit is the remainder of the benefit, in this case \$90.
20. In contrast, if the method in the instrument was not adopted the tax free component would gradually decrease over time and the taxable component would increase. For instance, in this example if this method was not used the second superannuation benefit would have a tax free component of \$9.99 and the taxable component would be \$90.01, assuming the benefit was \$100. This effect would compound for each subsequent benefit paid from the pension.

Compliance cost assessment

21. Compliance cost impact: Low – The regulatory impacts are minor. The legislative instrument is considered minor or machinery in nature OBPR22-02516.

Background

Commissioner of Taxation v Douglas

22. In *Douglas*, the Full Federal Court found that invalidity pensions which started to be paid from the Defence Force Retirement and Death Benefits Scheme and the Military Superannuation and Benefits Scheme on or after 20 September 2007 are not superannuation income streams. Rather, they are superannuation lump sums as defined in subsection 307-65(1) of the ITAA 1997.
23. The Commissioner considers that, following the reasoning of the *Douglas* decision, the same tax treatment applies to:
- a. reversionary pensions paid after the death of an invalidity pensioner under the DFRDB Act and MSBS Rules where the original invalidity pension commenced on or after 20 September 2007,
 - b. non-reversionary pensions paid after the death of an invalidity pensioner under the DFRDB Act that commenced on or after 20 September 2007.
24. The *Douglas* decision gives rise to some unique and exceptional circumstances. Prior to the decision, relevant pensions were considered to be superannuation income streams and the tax free component and taxable component of all payments from the pensions were determined under paragraph 307-125(3)(a) of the ITAA 1997 when the pension commenced. However, following the *Douglas* decision, the tax free component and taxable component should have been determined for

each superannuation lump sum payment just before the benefit was paid in accordance with paragraph 307-125(3)(b) of the ITAA 1997.

25. As a result, in the absence of an alternative method, the tax free component and taxable component of all payments made from the affected pensions on or after 20 September 2007 would be required to be recalculated on the basis the payments are now to be treated as superannuation lump sums. For each historical payment, the value of the superannuation interest from which the lump sum was paid would be determined under section 307-205 of the ITAA 1997 and the tax free component of the interest would be determined in accordance with sections 307-210, 307-220 and 307-225 of the ITAA 1997 as at just before the payment was made. The combined effect of these provisions is that the amount of the tax free component would be reduced after each successive payment and this would result in a corresponding increase in the proportion of the taxable component.

26. On 30 June 2021 Legislative Instrument F2021L00901 was registered and provided an alternative method for determining the tax free component for affected payments made before 1 July 2021. Under the alternative method, because the proportion of the tax free component is only calculated at the time the pension commences (in contrast to every time the benefit is paid), the proportion of the tax free component (and hence the taxable component) of the benefit paid remains constant – consistent with how the components' proportions were historically calculated before the *Douglas* decision.

27. The *Douglas* decision impacts approximately 15,000 pension recipients who, in the absence of an alternative method, would require the tax free component and taxable component calculations of all their past pension payments to be recalculated. Identifying accurate data over historical periods to undertake these recalculations creates significant administrative challenges for the administrator of the Defence Force Retirement and Death Benefits Scheme and the Military Superannuation and Benefits Scheme.

28. There is a risk that any attempt to recalculate the tax free components and taxable components based on historical information that may not be accurate could result in a detrimental tax outcome for some affected pension recipients through a reduction in their tax free component. Further, recalculating the tax free component and taxable component for historical payments would significantly delay the re-assessment of the tax outcome for individuals under the ATO remediation program following the *Douglas* decision.

29. Given the risks identified above concerning historical information not being accurate which may result in detrimental tax outcomes, the Commissioner considered it appropriate to set out an alternative method in Legislative Instrument F2021L00901. This ensured no affected pension recipient was disadvantaged by the recalculation of the tax free and taxable components of their past pension payments.

30. This position was extended to payments made during the 2021–22 financial year by Legislative Instrument F2022L00004, which was registered on 4 January 2022 and provided an alternative method for the determining the tax free component for affected payments made from 1 July 2021 to 30 June 2022.

31. This instrument extends the approach taken in Legislative Instruments F2021L00901 and F2022L00004 to apply to affected superannuation benefits paid during the 2022–23 financial year.

32. The method outlined above operates to determine the tax free component and taxable component of the benefit required by section 307-125. Any modifications to these components will continue to be applied after they are determined under section 307-125. This may occur, for instance, where sections 307-145 (concerning disability superannuation benefits) or 307-150 (concerning superannuation lump sums with untaxed elements) are required to be applied to the superannuation lump sum.

Consultation

33. Subsection 17(1) of the *Legislation Act 2003* requires, before the making of a determination, that the Commissioner is satisfied that appropriate and reasonably practicable consultation has been undertaken.

34. The Commissioner routinely publishes draft legislative instruments seeking public feedback for a minimum of four weeks. To avoid any detrimental effects for the affected pension recipients the Commissioner reduced this consultation period to two weeks, from 30 June to 14 July 2022 inclusive. The draft instrument and draft explanatory statement were published to the ATO Legal database. Publication was advertised via the 'What's new' page on that website, and via the 'Open Consultation' page on ato.gov.au. Major tax and superannuation publishers and associations monitor these pages and include the details in the daily and weekly alerts and newsletters to their subscribers and members. This ensures advice of the draft is disseminated widely across the tax professional community, and that they are in an informed position to provide comments and feedback. In consultation, one comment was received and has been taken into account in the finalisation of the instrument.

Exemption from disallowance and sunseting regime

35. Section 42 of the *Legislation Act 2003* provides for the disallowance of legislative instruments. However, paragraph 44(2)(b) of the *Legislation Act 2003* provides that section 42 does not apply to legislative instruments prescribed by regulation. Section 9 of the *Legislation (Exemptions and Other Matters) Regulation 2015* (EOMR) provides a list of instruments that are not subject to disallowance. Item 3 of the table in section 9 of the EOMR lists instruments (other than regulations) relating to superannuation. As a result, this instrument is not a disallowable legislative instrument under section 42 of the *Legislation Act 2003*.

36. The reason why this instrument is not subject to disallowance is found in the Explanatory Statement to the EOMR:

Item 3 is an instrument (other than regulations) relating to superannuation. This item preserves the exemption in item 39 of the table in subsection 44(2) of the Legislative Instruments Act. This exemption exists because exposure of superannuation instruments to disallowance would cause commercial uncertainty, as well as uncertainty for superannuation fund members and providers. These instruments are intended to have enduring operation and are not suitable for the disallowance process.

37. Part 4 of the *Legislation Act 2003* provides for the sunseting of legislative instruments. However, paragraph 54(2)(b) of the *Legislation Act 2003* provides that Part 4 of the LA does not apply if the legislative instrument is prescribed by regulation. Section 11 of the EOMR provides a list of instruments that are not subject to sunseting. Item 6 of the table in section 11 of the EOMR lists instruments (other than regulations) relating to superannuation. As a result, Part 4 of the *Legislation Act 2003* does not apply to this instrument.

38. The reason why this instrument is not subject to sunseting is found in the Explanatory Statement to the EOMR:

Item 6 is an instrument (other than a regulation) relating to superannuation. This item preserves the exemption in item 42 of the table in subsection 54(2) of the Legislative Instruments Act. Sunseting of instruments relating to superannuation could cause commercial uncertainty, as well as uncertainty for superannuation fund members and providers. These instruments are intended to have enduring operation and it would not be appropriate to subject them to sunseting.
