

Schedule 29 Special purpose foods

Note 1 This instrument is a standard under the *Food Standards Australia New Zealand Act 1991* (Cth). The standards together make up the *Australia New Zealand Food Standards Code*. See also section 1.1.1—3.

Special purpose foods are regulated by Part 9 of Chapter 2, which contains Standard 2.9.1, Standard 2.9.2, Standard 2.9.3, Standard 2.9.4, Standard 2.9.5 and Standard 2.9.6. This Standard prescribes information for these standards.

Note 2 The provisions of the Code that apply in New Zealand are incorporated in, or adopted under, the *Food Act 2014* (NZ). See also section 1.1.1—3.

S29—1 Name

This Standard is *Australia New Zealand Food Standards Code – Schedule 29 – Special purpose foods*.

Note Commencement:
This Standard commences on 1 March 2016, being the date specified as the commencement date in notices in the *Gazette* and the *New Zealand Gazette* under section 92 of the *Food Standards Australia New Zealand Act 1991* (Cth). See also section 93 of that Act.

S29—2 Infant formula product—calculation of energy

- (1) For paragraph 2.9.1—4(2)(a), the energy content of infant formula product must be calculated using:
- (a) the energy contributions of the following *components only:
 - (i) fat; and
 - (ii) protein; and
 - (iii) carbohydrate; and
 - (b) the relevant energy factors set out in section S11—2.
- (2) The energy content of infant formula product must be expressed in kilojoules.

S29—3 Infant formula product—calculation of protein content

For paragraph 2.9.1—4(2)(b), the protein content (**PC**) of infant formula product must be calculated in accordance with the following equation:

$$PC = NC \times F$$

where:

NC is the nitrogen content of the infant formula product.

F is:

- (a) for milk proteins and their partial protein hydrolysates—6.38; or
- (b) otherwise—6.25.

S29—4 Infant formula product—calculation of potential renal solute load

- (1) For paragraph 2.9.1—4(2)(c), the potential renal solute load (**PRSL**), in mOsm/100 kJ, must be calculated in accordance with the following equation:

$$PRSL = \frac{Na}{23} + \frac{Cl}{35} + \frac{K}{39} + \frac{P_{avail}}{31} + \frac{N}{28}$$

where:

Na is the amount of sodium in the infant formula product in mg/100 kJ.

Cl is the amount of chloride in the infant formula product in mg/100 kJ.

K is the amount of potassium in the infant formula product in mg/100 kJ.

P_{avail} is given by the formula set out in subsection (2).

N is the amount of nitrogen in the infant formula product in mg/100 kJ.

(2) In subsection (1), *P_{avail}* is calculated in accordance with the following equation:

$$P_{avail} = P_{mbf} + \left(\frac{2}{3} \times P_{sbf} \right)$$

where:

P_{mbf} is the amount of phosphorus in the milk-based formula.

P_{sbf} is the amount of phosphorus in the soy-based formula.
