## About this compilation

### This compilation

This is a compilation of the *Private Health Insurance (Medical Devices and Human Tissue Products) Rules 2025* that shows the text of the law as amended and in force on 1 July 2025 (the **compilation date**).

The notes at the end of this compilation (the **endnotes**) include information about amending laws and the amendment history of provisions of the compiled law.

### Uncommenced amendments

The effect of uncommenced amendments is not shown in the text of the compiled law. The details of amendments made up to, but not commenced at, the compilation date are underlined in the endnotes. Any uncommenced amendments affecting the law are accessible on the Register ([www.legislation.gov.au](http://www.legislation.gov.au)).

### Application, saving and transitional provisions

If the operation of a provision or amendment of the compiled law is affected by an application, saving or transitional provision that is not included in this compilation, details are included in the endnotes.

### Editorial changes

For more information about any editorial changes made in this compilation, see the endnotes.

### Presentational changes

The *Legislation Act 2003* provides for First Parliamentary Counsel to make presentational changes to a compilation. Presentational changes are applied to give a more consistent look and feel to legislation published on the Register, and enable the user to more easily navigate those documents.

### Modifications

If the compiled law is modified by another law, the compiled law operates as modified but the modification does not amend the text of the law. Accordingly, this compilation does not show the text of the compiled law as modified. Any modifications affecting the law are accessible on the Register.

### Self-repealing provisions

If a provision of the compiled law has been repealed in accordance with a provision of the law, details are included in the endnotes.

GK004	3D fusion cervical screw	The 3D Fusion cervical screw is part of the integral fixation mechanism for the 3D Fusion cervical System (also consisting of the 3D Fusion ACDF Cage and Locking Cap). These components are part of separate applications. The 3D Fusion ACDF Bone Screws intend to immobilize and stabilize the 3D Fusion ACDF Cage and facilitate spinal fusion between two adjacent lumbar vertebral bodies. The 3D Fusion ACDF Bone Screws are self-drilling, dual thread bone screws designed to fit with integral fixation features of the 3D Fusion cervical system. DE818	BlackArmor Carbon Fibre/PEEK Curved / Multicurved Rods	The BlackArmor material is a combination of continuous, high-strength carbon-fiber-reinforced PEEK and a procedure developed by icotec – Injection Moulding CFM (Composite Flow Moulding). The result is a non-metallic implant component with an interwoven 3D fibre architecture that provides unmatched strength and endurance. BlackArmor® is radiolucent in all diagnostic imaging modes (MRI, CT and X-ray) and will therefore not create imaging artifacts; a significant clinical benefit in the postoperative monitoring of anatomical structures and other forms of treatment.	Curved and Multicurved rods, Diameter: 6.0mm Radius: 120mm, 450mm Length: 40mm-300mm	\$555.00	Prescribed List reimbursement is only payable for the billing code when the device is used in patients with spinal tumours requiring regular magnetic resonance imaging (MRI) and/or computerised tomography (CT) imaging and/or adjuvant radiotherapy and/or proton therapy.

GK001	3D fusion ACDF	Stand-alone anterior cervical discectomy and fusion (ACDF) fixation system: cage, screws and locking cap. The 3DMorphic ACDF integral screw fixation device (cage) is intended to immobilize, stabilize and maintain the height between instrumented segments and support loading in the cervical spine until fusion occurs. The 3DMorphic ACDF device has a trapezoidal, ring shaped footprint with a central graft window that can receive bone graft. The superior and inferior surfaces of the device are made to fit the patient's vertebral endplate anatomy and feature serrated teeth to resist expulsion from the interbody space. The anterior surface of the device features screw holes and a threaded locking cap hole as the device is designed for use with integral fixation screws and a locking cap. The device is offered in a variety of footprints, heights, lordotic and scoliotic angles according to the patient's anatomy and surgeon's specifications.	Footprints: 10mm to 23mm L x 08mm to 30mm W. Minimum anterior height is 6mm. L = Anterior-posterior depth (DD in the catalogue), W = width (WW in the catalogue), height and angle vary according to surgeon request as the devices are custom-made. 		<p>screw fixation device (cage) is intended to immobilize, stabilize and maintain the space between instrumented segments and support loading in the lumbar spine until fusion occurs. The 3DMorphic ALIF device has a trapezoidal, ring shaped footprint, and features a central graft window that can receive bone graft. The superior and inferior surfaces of the device are adapted to match the patient's vertebral endplate anatomy and feature serrated teeth to resist expulsion from the interbody space. The anterior surface of the device features screw holes and threaded locking cap holes as the device is designed for use with integral fixation screws and locking caps. The cage is offered in a variety of footprints, heights, lordotic and scoliotic angles according to the patient's anatomy and surgeon's specifications.</p>	<p>Anterior-posterior depth (DD in the catalogue), W = width (WW in the catalogue), height, angle and number of screws vary according to surgeon request and patient anatomy as the devices are custom-made. Please see attached catalogue for full list of sizes.</p>

KH075	CARMEN Anterior Cervical Cage	The CARMEN anterior cervical cage component is intended to be used for anterior cervical inter-body fusion procedures in skeletally mature patients with cervical disc disease at one level from the C2-C3 disc to the C7-T1 disc. Cervical disc disease is defined as intractable radiculopathy and/or myelopathy with herniated disc and/or osteophyte formation on posterior vertebral end-plates producing symptomatic nerve root and/or spinal cord compression confirmed by radio-graphic studies. This cage is to be used in patients who have had six weeks of non-operative treatment. The CARMEN cage must be used with supplemental fixation. The Carmen cage is also required to be used with autogenous bone graft comprised of cancellous and/or corticocancellous bone graft and is to be implanted via an open, anterior approach	Height 4 mm - 7 mm Footprint : 12 mm x 14 mm ; 14 mm x 14 mm	\$2,188.00

The expandable interbody spacer is inserted into the lumbar disc space and expanded to fit the patient anatomy. The implants are offered in parallel, lordotic, and hyperlordotic configurations to help restore the natural curvature of the spine. The implants can be used in single placement or pairs with typical approaches being transforaminal lumbar interbody fusion (TLIF) and posterior lumbar interbody fusion (PLIF). The implants feature a bulleted nose for ease of insertion and anti-migration ripples on both the inferior and superior surfaces to provide increased stability and help prevent anterior/posterior movement of the device. 		and cellular components while preserving the extracellular matrix (ECM). The extracellular matrix is the structural framework that provides support and organization to tissues. It consists of various proteins, such as collagen, elastin, and other growth factors, that contribute to tissue strength and regeneration. The resulting acellular dermal matrix serves as a scaffold for tissue repair and regeneration. It can be used in procedures like breast reconstruction, hernia repair, wound healing, and other soft tissue reconstructions.

QQ832	SMARTeZ RS Rigid Shell Single Use Elastomeric Infusion Pump	DESCRIPTION The SMARTeZ RS Rigid Shell Elastomeric Infusion Pump (SINGLE USE for a Single patient), elastomeric pump with rigid shell on the fluid reservoir. The device works independently of main power supplies or batteries, enabling patient to be treated in an ambulatory manner. Fluid is delivered to patient by positive pressure applied by the elastomeric membranes on the fluid reservoir. The flow rate is determined by the combination of the flow restrictor (capillary tube) and positive pressure of the elastomeric membrane. This pressure delivers the fluid against the back pressure of the catheters and infusion site. Suitable for short term and long term infusion.	Long Term Infusion: 60ml - 300ml, 0.5ml/hr to 11.5ml/hr flow rate. Short Time Infusion: 50ml - 250ml, 50ml/hr to 250ml/hr flow rate.	\$28.00

BA303	Provena™ Midline Catheter	The Provena™ Midline Catheters are intended to be inserted into a patient's vascular system to sample blood, administer fluids and power injection of contrast media. The unique feature of Provena™ Midline Catheters is that they are configured with a smaller outer diameter with minimal reduction to the intraluminal area assisting in providing the optimal catheter to vein ratio, whilst still enabling good flow rates to ensure the therapy delivery is	4Fr dual lumen	\$131.00

The stylet material provides internal reinforcement to aid in catheter placement. The Sherlock 3CG stylet may be used with the Sherlock 3CG Tip Confirmation System (TCS) to provide catheter tip placement information during the procedure. The Sherlock 3CG stylet, Sherlock 3CG TCS system, and the Site~Rite 8 Ultrasound System, include a comprehensive, integrated set of PICC placement tools such as vein location, lumen size visualisation, needle guided vein access, catheter tip orientation, catheter tip depth, catheter tip placement using ECG, and ECG placement documentation. In most instances, this removes the need for confirming PICC tip placement through radiological methods.	5 French Triple Lumen	\$131.00

## Endnotes

### Endnote 1—About the endnotes

The endnotes provide information about this compilation and the compiled law.

The following endnotes are included in every compilation:

Endnote 1—About the endnotes

Endnote 2—Abbreviation key

Endnote 3—Legislation history

Endnote 4—Amendment history

### Abbreviation key—Endnote 2

The abbreviation key sets out abbreviations that may be used in the endnotes.

### Legislation history and amendment history—Endnotes 3 and 4

Amending laws are annotated in the legislation history and amendment history.

The legislation history in endnote 3 provides information about each law that has amended (or will amend) the compiled law. The information includes commencement details for amending laws and details of any application, saving or transitional provisions that are not included in this compilation.

The amendment history in endnote 4 provides information about amendments at the provision (generally section or equivalent) level. It also includes information about any provision of the compiled law that has been repealed in accordance with a provision of the law.

### Editorial changes

The *Legislation Act 2003* authorises First Parliamentary Counsel to make editorial and presentational changes to a compiled law in preparing a compilation of the law for registration. The changes must not change the effect of the law. Editorial changes take effect from the compilation registration date.

If the compilation includes editorial changes, the endnotes include a brief outline of the changes in general terms. Full details of any changes can be obtained from the Office of Parliamentary Counsel.

### Misdescribed amendments

A misdescribed amendment is an amendment that does not accurately describe how an amendment is to be made. If, despite the misdescription, the amendment can be given effect as intended, then the misdescribed amendment can be incorporated through an editorial change made under section 15V of the *Legislation Act 2003*.

If a misdescribed amendment cannot be given effect as intended, the amendment is not incorporated and “(md not incorp)” is added to the amendment history.

**Endnote 5—Editorial changes**

In preparing this compilation for registration, the following kinds of editorial change(s) were made under the *Legislation Act 2003*.

**Subsection 15(2)****Kind of editorial change**

Removal of redundant text

**Details of editorial change**

Schedule 1 item 3 of the *Private Health Insurance (Medical Devices and Human Tissue Products) Amendment Rules (No. 1) 2025* instructs to omit “the former Prescribed List” and substitute “of Schedule 1” in subsection 15(2).

This amendment results in two consecutive occurrences of the word “of”.

This compilation was editorially changed to omit the first occurrence of the word “of” before the text “Schedule 1” in subsection 15(2) to remove the redundant text.
