BL046	FINEVISION HP TORIC (POD FT 49P)	The POD FT 49P (FINEVISION HP TORIC) posterior chamber intraocular lens is indicated for the replacement of the human lens to achieve the visual correction of aphakia and pre-existing corneal astigmatism in astigmatic adult patients in whom a cataractous lens has been removed by phacoemulsification who desire improved uncorrected vision, reduction of residual refractive cylinder, useful near and intermediate visual functions, and reduced spectacle dependence. The intraocular lens is intended to maintain rotational stability after placement in the capsular bag and is intended to be placed in the capsular bag. The GF-Glistening Free, material is an acrylic copolymer of medical quality which includes a UV absorbing filter. For the yellow intraocular lenses, a blue light-filtering chromophore is covalently bounded to the UV-absorbing material and the spectral transmittance through a central diopter IOL. They have biconvex optics with an aspheric anterior diffractive trifocal structure that partitions the light to give pseudo-accommodative vision and a posterior toric optic which compensates for corneal astigmatism. The add-power for near vision is + 3.5 diopters and for the intermediate vision + 1.75 diopters at IOL plane allowing the patient to benefit from near vision without a reading aid, and from increased spectacle independence for near and intermediate visions. RQSOLUTIONS MEDICAL DEVICES DISTRIBUTION SUPPORT PTY LTD

QQ325	Glaukos iStent Infinite System	The iStent infinite System consists of a single-use pre-loaded injector designed to deliver, with an unlimited insertion mechanism, three intraocular stents (Model G2-W) through a single incision into Schlemm's canal, creating a bypass through the trabecular meshwork to increase physiological aqueous outflow and reduce IOP. The stents used in the iStent infinite System are identical to those in iStent inject W (Billing code RQ084), which is designed to deliver two stents. As per the TGA submission and associated Instructions for Use, the iStent infinite is intended to reduce IOP in adult patients with primary open-angle glaucoma, pseudo-exfoliative glaucoma or pigmentary glaucoma, and can be performed with or without cataract surgery. It may also be implanted in patients who continue to have elevated IOP despite prior treatment with glaucoma medications and/or conventional glaucoma surgery.	One Size	$1,444.00
RQ084	Glaukos iStent inject W System	An improved product to PLAC billing code RQ075 (product name iStent Inject) with a wider flange for better surgeon visualisation and stent confirmation. The improvement includes a delivery injection unit with 2 stents. Intended purpose per TGA submission is for implantation with or without cataract surgery and to reduce intraocular pressure in adult patients diagnosed with mild to moderate primary open-angle glaucoma (POAG) currently treated with ocular hypotensive medication.	One Size	$1,444.00
RQ075	iStent Inject System	The iStent Inject is a pre-loaded injection system which delivers two stents across the trabecular meshwork to provide a pathway for aqueous humor to flow from the anterior chamber. It is indicated for use in conjunction with cataract surgery for the reduction of IOP in subjects with mild to moderate open angle	One size	$1,444.00

02.01.05.04 - Total Ossicle Replacement (three)

INTERMED MEDICAL PTY LTD

QQ464	TORP - Total Ossicular Replacement Prosthesis	Total implant made of titanium, for reconstructing a destroyed middle-air ossicular chain (chain of sound transmission) between the footplate of the stirrup bone and the plane of the eardrum. The implants are available in fixed length and adjustable versions for shortening. The implant can be subdivided into three areas: 1.) the implant shoe; 2.) the implant shaft; 3.) the perforated implant plate. The implant plate can be arranged centrically (round) towards the implant shaft or eccentrically (oval). In the eccentric version (oval, fixed length only), an additional groove has been worked into the plate to improve receiving the malleus handle. The surface of the predefined contact points (upper side of implant plate and implant shoe) is roughened in order to facilitate better bonding to the eardrum resp. the stapes footplate. To improve the adaptation of the implant plate to the plane of the eardrum, the angle between the implant plate and shaft can be optimally adapted because the shaft below the implant plate tapers off (onwards from a total length of 3.5 mm). The product is available in different lengths. The length information is stated both on the outer package as well as on the product’s sterile packaging. STRYKER AUSTRALIA PTY LTD

HW558	TransForm Occlusion Balloon Catheters	The TransForm Occlusion Balloon Catheter consists of a single lumen catheter shaft with a balloon attached at the distal end. The balloon is available in a compliant version and a super compliant version. Radiopaque markers are located at the proximal and distal ends of the balloon to facilitate fluoroscopic visualization. The balloon catheter is recommended for use with a Stryker Neurovascular 0.014 in (0.36 mm) guidewire to seal the distal segment of the catheter lumen allowing inflation of the balloon. The guidewire can be moved distally or proximally once beyond the distal tip (seal portion) of the catheter and still maintain a positive seal for inflating the balloon. The distal outer segment of the catheter shaft is coated with a hydrophilic material that reduces friction during manipulation in the vessel. A luer fitting hub at the proximal end of the catheter is used for the attachment of accessories.	Effective Length: 150 cm Balloon Outer Diameter: 3 mm - 7 mm Balloon Nominal Length: 5 mm - 30 mm Maximum Catheter Shaft Outer Diameter: 2.8 F	$1,500.00

VK028	Quad Plate Plus	The Guided Growth Plate System Plus consists of different sizes of quad- Plate plus, different cannulated and solid screw options. The device is designed for the gradual correction of paediatric congenital as well as acquired deformities in both the upper and lower extremities, provided that the physics are not fused. The plates feature a contoured waist and low profile for paediatric usage. There is a centre hole in the plates for a temporary guide pin to be implanted to aid application and removal of the plate. The plates are attached to the external surface of the bone over the growth plate by screws. These screws are not locked to the plate, but rather are allowed to swivel and diverge in their position as bone growth occurs. The implant acts like a flexible hinge, permitting growth at the growth plate to gradually straighten the limb.	16mm plate 22mm plate	$130.00

UK038	BIOTWIN	The composite interference screw is a fixation system designed to insure fixation of a transplant within a bone tunnel as part of a knee ligament reconstruction procedure. It is a resorbable device composed of poly(L-Lactic-co-D,L-Lactic) acid, hydroxyapatite and Beta-tricalcium Phosphate. The composite interference screw is available in different diameters (D) and lengths (L) thus allowing the adjustment of the size of the screw to the size of the bone tunnel and therefore an optimal fixation of the transplant. Its internal print is unique and specific to the installation instrumentation to be used for its implantation.	Length: 20 to 35mm; Diameter: 7 to 12mm	$457.00

		user friendly ring fixation system for trauma applications, limb lengthening and deformity correction. It is based on the science, methodology and principles of Prof Ilizarov. The circular frame is simple, offering preassembled functional components that are easy to connect and operate. The frame is stable with anti-rotational feature on connection elements that prevents any undesirable movement. Its unique wire and half pin fixation elements provide efficient bone segment stabilisation. A biomechanically superior metal-plastic interface is stable both during and between adjustments. The system is versatile, consisting of rings, half-rings, foot plates, 5/8 rings and arches. Full control of bone segments accomplished with Orthofix circular frame allows precise movement of segments without compromising stability.

VK033	3D Telescopic Strut	Struts consist of two telescopic aluminium tubes, outer tube and an inner tube, which can be locked together at various lengths using the side locking bolt and clamp washer. The inner tube is attached to a spring-loaded, black knurled adjustment knob. The adjustment knob mates with the threaded rod in a manner such that the rod translates relative to the inner tube when the knob is rotated. This will provide gradual changes of overall strut length in 0.5mm increments. A reference arrow with plus sign located on the base of the adjustment knob indicates the direction of turning to perform strut elongation - distraction. Each strut has two special joints and one at the base of the outer tube and the other at the end of the threaded rod. Each joint has a mounting stud, which can be inserted into the mounting holes on the ring tabs and held in place by the locking screw. The rapid adjustment of the strut length is achieved by untightening the side locking bolt, sliding the inner tube relative to the outer tube to the desired length. The rapid adjustment is indicated by the inner tube	Struts are available in four sizes - ultrashort, short, medium and long providing adjustment range from 45mm to 318mm. Ultrashort strut 45 - 101mm range Short strut 92 - 122mm range Medium strut 114 - 184mm range Long strut 158 - 318mm range	$1,235.00

		scale in 1mm increments relative to the orange line mark on the outer tube. The gradual adjustment is achieved by pulling and rotating the adjustment knob resulting in a noticeable detect click every 0.5mm of adjustment. Gradual adjustment is indicated by the scale relative to the green line mark.		
VK032	3D Rapid Adjust Strut	The rapid adjust strut is made of two metal casings encapsulating a threaded rod. It has the ability to correct acutely or gradually. The rapid adjust strut ends have 45 degree locking angulation with 360 degree rotation. The rapid adjust struts have unique ball and claw universal lockable joint at both ends of the strut. Two rapid adjust struts are sufficient for fracture reduction and initial stabilisation, whereas three rapid adjust struts are necessary for walking and weight bearing. Loosening of the ball claw joints allows for verification of the amplitude of angular correction and horizontal translation, magnitude of rotational correction and stability of fixation in coronal, sagittal and horizontal planes. Akva Surgical Pty Ltd

VK031	Orthofix Circular Frame Foot Plate	The Orthofix circular frame is a surgeon designed, user-friendly ring fixation system for trauma applications, limb lengthening and deformity correction. It is based on the science, methodology and principles of Prof Ilizarov. The circular frame is simple, offering preassembled functional components that are easy to connect and operate. The frame is stable with anti-rotational feature on connection elements that prevents any undesirable movement. Its unique wire and half pin fixation elements provide efficient bone segment stabilisation. A biomechanically superior metal-plastic interface is stable both during and between adjustments. The system is versatile, consisting of rings, half-rings, foot plates, 5/8 rings and arches. Full control of bone segments accomplished with Orthofix circular frame allows precise movement of segments without compromising stability.	100mm - 220mm foot plates	$1,872.00

GEISTLICH PHARMA AUSTRALIA PTY LTD

GI020	Geistlich Bio-Gide Shape	Geistlich Bio-Gide Shape is intended to be used as a barrier membrane in the regeneration of bone defects and used after bone grafting procedures in extraction sockets. Because of its elasticity, Geistlich Bio-Gide Shape should be used in combination with void-filling bone graft materials such as autologous bone or bone substitutes (e.g. Geistlich Bio-Oss / Geistlich Bio-Oss Collagen) whenever possible. The porous surface, facing the bone, allows the ingrowth of bone-forming cells. The dense surface, facing the soft tissue, prevents the ingrowth of fibrous tissue into the bone defect.	14 x 24 mm	$224.00

HQ002	SURGITIME PTFE	Surgitime PTFE is a synthetic non-absorbable membrane that is 100% biocompatible and not derived from animal source. This Membrane is considered to be a barrier for tissue regeneration. polytetraflouroethylene membranes or mechanical barriers for guided bone regeneration are used to prevent migration of cells from epithelial and connective tissues, thus providing a proper space for the formation of a natural fibrin structure which is the bone tissue precursor. Surgitime PTFE are a high-density sheet with a surface structure and porosity suitable to prevent intergration and passage of bacteria within the interstices of the material, and simultaneously facilitate adhesion of the host cells and the material.	30x20mm- Thickness 0,10mm 30x20mm- Thickness 0,25mm	$159.00

MAXONIQ PTY LTD

QQ132	OsseoFrame	The MAXONIQ OsseoFrame is a subperiosteal, titanium (Ti64), patient-specific surgical implant individually designed from a 3D Computed Tomography (CT) or Cone Beam CT (CBCT) scan provided to MAXONIQ by the referring surgeon. The OsseoFrame is fixated to alveolar bone of the maxilla or mandible to fit the natural contours. An OsseoFrame is comprised of a baseplate with holes for screw fixation and transmucosal connectors for dental prosthesis attachment. The OsseoFrame is intended to be used on the alveolar bone of the mandible or maxilla to provide a stable and permanent platform for fixation of the dental prosthesis. The OsseoFrame is indicated to restore oral function and facial aesthetics in edentulous patients missing 3 or more adjacent teeth with atrophic jaws, low sinus floors or who have undergone partial jaw resection. The OsseoFrame may also be beneficial for patients who cannot tolerate removable dentures and desire a fixed solution; who cannot tolerate complex bone graft surgery to support dental implants; or if they want replacement teeth immediately after surgery. The dental prosthesis is supplied separately and is to be fitted by surgeon, a restorative dentist or a prosthodontist.	The OsseoFrame may be supplied as either a 2 post, 3 post or 4 post variant of the prosthesis. Effectively, these size variants are designed for partial overdentures (2 and 3 post variants) or a 4 post variant for full arch restoration. The 4 post, full arch variant is designed to treat a fully edentulous patient, whilst the 2 and 3 post variants are designed to treat patients missing 3 or more teeth. The clinician and prosthodontist will determine the appropriate number of posts for an individual patient.	$3,254.00

		The OsseoFrame may be supplied with a biomodel and a surgical guide, both these items have separate Prosthesis Listings.

TU068	Thoraflex™ Hybrid	Thoraflex™ Hybrid device is a woven polyester prosthesis, with the addition of nitinol ring stents. The device is specifically designed for the treatment of aneurysm and/or dissection in the ascending thoracic aorta, aortic arch and descending thoracic aorta. Branches are provided to accommodate reconstruction of the major aortic branch vessels and intra-operative attachment of a perfusion cannula during cardio-pulmonary bypass where antegrade perfusion techniques are employed. The stented section of the graft enables treatment of the diseased descending thoracic aorta in a single-stage procedure without the need to anastamose a stented and unstented prostheses together. Thoraflex Hybrid™ device has been impregnated with an absorbable protein. The aim of the impregnation is to provide a polyester vascular prosthesis which does not require pre-clotting. The protein is a bovine gelatin which has been cross-linked to a set level to control its rate of removal. It serves in place of fibrin, which seals the polyester prosthesis during normal pre-clotting. The liner articulates with an acetabular cup and femoral head as part of a total hip arthroplasty. The liner has an inner clearance of 0.3 mm with respect to the femoral head. The outer clearance has been increased to 0.6 mm to avoid locking of the outer joint due to the interposition of fibrous tissue. The centre of the inner head is cranialized with respect to the centre of the liner (1,5 mm), to permit the self-centring of the system. MA625	Delta Mobile Liner UHMWPE	The Mobile Liner UHMWPE functions as part of a double mobility system. It is coupled with an outer liner before being fitted onto the head of a femoral stem. The inner liner provides the articulating surface within the outer liner and the coupled liner provides the articulating surface with the acetabular shell after insertion into the acetabular shell/Cup as part of a total hip arthroplasty. The expandable interbody spacer is inserted into the lumbar disc space and expanded to fit the patient anatomy. The implants are offered in parallel, lordotic, and hyperlordotic configurations to help restore the natural curvature of the spine. The implants can be used in single placement or pairs with typical approaches being transforaminal lumbar interbody fusion (TLIF) and posterior lumbar interbody fusion (PLIF). The implants feature a bulleted nose for ease of insertion and anti-migration ripples on both the inferior and superior surfaces to provide increased stability and help prevent anterior/posterior movement of the device. QQ832	SMARTeZ RS Rigid Shell Single Use Elastomeric Infusion Pump	DESCRIPTION The SMARTeZ RS Rigid Shell Elastomeric Infusion Pump (SINGLE USE for a Single patient), elastomeric pump with rigid shell on the fluid reservoir. The device works independently of main power supplies or batteries, enabling patient to be treated in an ambulatory manner. Fluid is delivered to patient by positive pressure applied by the elastomeric membranes on the fluid reservoir. The flow rate is determined by the combination of the flow restrictor (capillary tube) and positive pressure of the elastomeric membrane. This pressure delivers the fluid against the back pressure of the catheters and infusion site. Suitable for short term and long term infusion.	Long Term Infusion: 60ml - 300ml, 0.5ml/hr to 11.5ml/hr flow rate. Short Time Infusion: 50ml - 250ml, 50ml/hr to 250ml/hr flow rate.	$28.00

The stylet material provides internal reinforcement to aid in catheter placement. The Sherlock 3CG stylet may be used with the Sherlock 3CG Tip Confirmation System (TCS) to provide catheter tip placement information during the procedure. The Sherlock 3CG stylet, Sherlock 3CG TCS system, and the Site~Rite 8 Ultrasound System, include a comprehensive, integrated set of PICC placement tools such as vein location, lumen size visualisation, needle guided vein access, catheter tip orientation, catheter tip depth, catheter tip placement using ECG, and ECG placement documentation. In most instances, this removes the need for confirming PICC tip placement through radiological methods.	5 French Triple Lumen	$131.00
