## APPENDIX B.

## SPECIFICATION FOR CHLORIDE OF LIME FOR TREATMENT OF DRINKING WATER IN SHIPS.

1. The Chloride of Lime must be of approved quality.
2. It must contain not less than 24 per cent. and not more than 26 per cent. available chlorine.
3. It must contain not less than 14 per cent. of free quick lime (CaO).
4. The total water existing in all forms, consisting largely, if not entirely, of the water in combination in the form of calcium hydroxide, must not exceed 7.5 per cent.
5. It shall be of such stability that after passing four weeks in an oven kept at 140° F. ( $\pm 2^\circ$ ) the percentage of available chlorine shall not decrease more than 2.
6. The powder to be put up in  $\frac{1}{4}$  lb. tins, the date of issue by the manufacturer to be stamped on the base of each tin.
7. Each tin and contents (except the measure, which may be used again) whether partially used or not, to be renewed within one year following the date stamped on the tin.
8. Each tin to contain a measure, made of a material resistant to chlorine, to contain 60 grains of the powder, when full, i.e., sufficient to chlorinate approximately 200 gallons of water.

## APPENDIX C.

## CONDITIONS OF APPROVAL OF DISINFECTANTS FOR SHIPS.

## I. PHENOL OR CARBOLIC ACID.

A liquid containing not less than 90 per cent. of free carbolic and/or cresylic acid, and approved by a Medical Inspector of Shipping. The approved disinfectant must have a germicidal value not less than that of pure phenol when tested against *B. typhosus* in the presence of excess of organic matter, and must be miscible with sea water in the manner described on the containers so as to produce a 5 per cent. emulsion which shall show no appreciable separation of the disinfectant after standing for six hours at the normal temperature of about 60° F.

## II. CHLORINE MAY BE CARRIED EITHER IN THE FORM OF

(a) *Stabilized Chloride of Lime.*

If stabilized chloride of lime is carried the quantity of phenol or cresylic acid may be reduced by not more than 50 per cent., and the amount so reduced must be replaced by an equal weight of stabilized chloride of lime.

*Chloride of lime must be dry and suitably stabilized yielding not less than 30 per cent. by weight of available chlorine* and must be put up in tins of not more than 10 lb. per tin, the date of issue by the manufacturer being stamped on each tin. Each tin and contents, whether partly used or not, must be renewed within one year of the date stamped on the tin. Full instructions for the use of the powder for cleansing decks, bulkheads, urinals, lavatory basins, &c., must be given on a label attached to each tin. Samples for test will be taken from time to time. This material is not to be used for the sterilization of drinking water, nor for the sterilization of dejecta, soiled utensils or apparel of persons suffering from a contagious or infectious disease;

or (b) *Stabilized Hypochlorite Solution.*

If a stabilized solution of hypochlorite of soda is preferred to chloride of lime, this preparation may be carried in place of the chloride of lime, provided the total quantity of available chlorine is the same. The amount of phenol or cresylic acid carried may then be reduced by 50 per cent. The conditions and restrictions as to its purpose and use are the same as for chloride of lime. The hypochlorite solution must yield at least 10 per cent. of available chlorine. If the solution should at any time decrease in strength so that the available chlorine falls to less than 8 per cent. it must be replaced as soon as possible. The liquid is to be stored in stoneware jars or other containers, of not less than two gallons nor more than ten gallons capacity, not liable to cause a diminution of the strength of the solution. The jars must be sealed either with stoneware stoppers or with stoppers which have no appreciable action in diminishing the strength of the solution. Unless it can be shown that the strength of the solution is unaltered, the disinfectant must be renewed at least once a year. The date of sealing the containers and directions for use must be stated on a label adhering firmly to the jar;

or (c) *In Ships in which a Sea-water Electrolyzer is Installed,*

capable of giving an unlimited quantity of sodium hypochlorite solution containing not less than 0.1 per cent. of available chlorine, the quantity of phenol or cresylic acid disinfectant carried may be reduced by not more than 50 per cent. The type of electrolyzer must be approved by a Medical Inspector of Shipping and subject to inspection from time to time. A sample of electrolyte will occasionally be taken for testing the chlorine content. The conditions and restrictions as to its purpose and use are the same as those for chloride of lime or hypochlorite solution in tins.

III. THE STABILIZED CHLORIDE OF LIME PUT UP IN  $\frac{1}{2}$  LB. TINS

is intended to be used for sterilizing *drinking water*. Instructions for use will be found on pages 11-13 of the 1929 edition of the Ship Captain's Medical Guide. For conditions of approval see Appendix B.
