**NEW ADVERTISING RATES FOR
GOVERNMENT NOTICES**

FROM 24 AUGUST 1988, new advertising rates will apply. These rates will be:

- \$345.00 per typeset page
- \$115.00 per camera-ready page
- \$225.00 per altered magnetic tape page
- \$150.00 per unaltered magnetic tape page

These rates will apply for notices submitted for publication in GN Gazette No. 31 of 24 August 1988 and all later issues.

For further information contact Don Kime on (062) 95 4657.

**NEW ADVERTISING RATES FOR
SPECIAL GAZETTES**

FROM 22 AUGUST 1988, notices submitted for publication on or after this date will be charged at the new Government Notices rates plus \$100.00 per issue.

**NEW ADVERTISING RATES FOR
PERIODIC GAZETTES**

FROM 22 AUGUST 1988, notices submitted for publication on or after this date will be charged at the rate of \$260.00 per typeset page plus \$200.00 per issue. Material supplied as camera-ready copy and magnetic tape (altered and unaltered) will be charged at the respective Government Notices rates.

Variation of closing times

Commonwealth of Australia Gazette

Monday, 3 October 1988 is a public holiday in the Australian Capital Territory, thus affecting the closing times for submission of copy for several issues of the *Gazette*. Notices for publication should be lodged at the Gazette Office, unless otherwise specified, by the following times for the issues concerned.

Government Notices Gazette Issues:

Issue dated 5 October 1988:

All notices: Wednesday, 28 September 1988 at 10.00 a.m.

GENERAL INFORMATION

IMPORTANT COPYRIGHT NOTICE

© Commonwealth of Australia

This work is copyright. Apart from any use as permitted under the *Copyright Act 1968*, no part may be reproduced by any process without written permission from the Director Publishing and Marketing AGPS. Inquiries should be directed to the Manager, AGPS Press, Australian Government Publishing Service, GPO Box 84, Canberra ACT 2601.

Government Notices issues, published each Wednesday, containing all legislation, proclamations, special information and government departments notices and are sold at \$5.95 each or on subscription of \$290.00 (50 issues), \$150.00 (25 issues) or \$75.00 (12 issues).

NOTICES FOR PUBLICATION and related correspondence should be addressed to:

Gazette Officer, Australian Government Publishing Service, GPO Box 4007, Canberra ACT 2601. Telephone (062) 95 4656

or lodged at AGPS, Government Printing Office Building, Wentworth Avenue, Kingston. Notices are accepted for publication in the next available issue, unless otherwise specified.

Except where a standard form is used, all notices for publication must have a covering instruction setting out requirements. A typewritten original or good copies are to be provided, wherever possible double-spaced, with a margin surrounding the typewritten matter. Copy is to be confined to one side of the paper, sheets are to be of uniform size (preferably A4), numbered consecutively and fastened securely together. Dates, proper names and signatures particularly are to be shown clearly.

Copy will be returned unpublished if not submitted in accordance with these requirements.

CLOSING TIMES. Notices for publication should be lodged at AGPS, Government Printing Office Building, unless otherwise specified, by the following times (except at holiday periods for which special advice of earlier closing times will be given).

Government Notices Gazette all copy: Friday at 10.00 a.m. in the week before publication.

PRIVATE NOTICES

The rates of charge and conditions applying to acceptance of copy for private notices are as follows:

- (a) minimum charge up to 125 words \$58.00;
- (b) each 25 words (or part thereof) thereafter \$12.00.

Remittances must be forwarded with a copy of the notice for publication unless prior credit approval has been granted for account customers. Account customers are reminded that payment is due immediately on presentation of invoice. Should payment not be received within twenty-eight days of the invoice date, credit privileges will be withdrawn.

Notices received without payment or from account customers whose credit privileges have been withdrawn will be returned unpublished.

SUBSCRIPTIONS are payable in advance and are accepted for a maximum period of one year. All subscriptions are on a firm basis and refunds for cancellations will not be given. Rates include surface postage in Australia and overseas. Other carriage rates are available on application.

AVAILABILITY. The *Gazette* may be purchased by mail from:

Mail Order Sales, Australian Government Publishing Service, GPO Box 84, Canberra ACT 2601

or over the counter from Commonwealth Government Bookshops at:

Adelaide: 55 Currie St, tel. (08) 237 6955
Brisbane: 294 Adelaide St, tel. (07) 229 6822
Canberra: 70 Alinga St, tel. (062) 47 7211
Hobart: 162 Macquarie St, tel. (002) 23 7151
Melbourne: 347 Swanston St, tel. (03) 663 3010
Perth: 200 St George's Tce, tel. (09) 322 4737
Sydney: 120 Clarence St, tel. (02) 29 1940

Commonwealth Acts and Statutory Rules, Australian Capital Territory Ordinances and Regulations, and other Commonwealth Government publications may also be purchased at these addresses.

ALL REMITTANCES should be made payable to: Collector of Public Moneys, Australian Government Publishing Service.

OTHER ISSUES OF THE GAZETTE

Public Service issues contain notices concerning administrative matters, including examinations, vacancies, transfers and promotions within the Australian Public Service and the Services of the Australian Postal Commission, Australian Telecommunications Commission, Commonwealth Teaching Service and Defence Force appointments etc. These issues are published weekly at 10.30 a.m. on Thursday, and sold at \$8.95 each or on subscription of \$395.00 (50 issues), \$206.00 (25 issues) or \$103.00 (12 issues).

Business issues, published each Tuesday, containing Notices under the Co-operative Companies and Securities Scheme, Bankruptcy Act and Private Notices and sold at \$3.95 each or on subscription of \$220.00 (50 issues), \$116.00 (25 issues) or \$58.00 (12 issues).

Special issues include notices which require urgent publication. All costs associated with producing Specials will be borne by the responsible department or authority. A limited number of *Special Gazettes* will be made available for sale from the Commonwealth Government Bookshop, Canberra, on the day of publication. General distribution of these notices will be by their inclusion in the next published issue of the *Government Notices Gazette* or *Business Gazette* as well as in the next published issue of the series of the *Gazette* in which the notice would normally have been published.

Tariff concessions issues contain notices of tariff concessions proposed, granted or revoked in accordance with the provisions of Part XVA of the *Customs Act 1901*. These issues are published each Wednesday and are sold at \$1.95 or on subscription only at \$115.00 for 50 issues including surface postage.

Periodic issues contain lengthy notices of a non-urgent nature, including the following: certificates of Australian citizenship; registered tax agents; authorised celebrants; unclaimed deposits and moneys; Australian Public Service conditions of entry and advancement; appointments to the Australian Public Service; holders of import licences and tariff quotas. Issues are made at irregular intervals as required, at individual prices according to size. Advice of availability is given in the *Government Notices, Business and Public Service issues* immediately following the day of publication. Periodic issues are not available on subscription, but standing orders are accepted for all selected issues.

Purchasing and Disposals issues of the *Gazette* provide information on Commonwealth purchases and disposals and other matters of general interest to persons buying from or selling to the Commonwealth. These issues are published each Wednesday and sold at \$3.95 or on subscription of \$200.00 including postage for 50 issues.

Index issues contain references to entries in the Government Notices issues and entries in the Orders in Council, Notices under the Superannuation Act, Notices under the

Public Service Act, and Determinations under the Public Service Act sections of the Public Service issues. Index issues are published quarterly, are available over the counter from Commonwealth Government Bookshops and are supplied without charge to annual subscribers to the Government Notices issues.

N.N.—8863995

Special Information

NOTICES UNDER THE INDEPENDENT AIR FARES COMMITTEE ACT 1981

<i>Operator and reference</i>	<i>Section of Act</i>	<i>Date notified</i>
-------------------------------	-----------------------	----------------------

Determination and decision

AIR CENTRAL EYRE P/L (A25 and D147/88)	15 and 17 (4)	31.8.88
--	---------------	---------

Determination of the following one-way economy air fares representing increases of approximately 9.5 per cent:

Wudinna-Adelaide	\$95	Cleve-Adelaide	\$81
------------------	------	----------------	------

and approval of the following discount return fares under specified conditions as proposed by the operator:

Wudinna-Adelaide	\$184	Cleve-Adelaide	\$154
------------------	-------	----------------	-------

All fares are effective from 2 September 1988.

Discount fares approved on basis of estimates provide by the operator that they will generate additional traffic and improve profitability.

Decision

AUSTRALIAN AIRLINES (D163/88)	17 (4)	1.9.88
ANSETT AIRLINES (D166/88)		

Approval to offer the following group discount fares on all routes at the stated percentages off normal adult economy fares, until 30/31 October 1990 under specified conditions as proposed by the operators:

- Common interest (15 per cent discount for a minimum of ten adult passengers)
- School group escorts (50 per cent discount)
- IATA interrupted passengers (10 per cent discount).

Extension of previous approval with no change in discount levels or conditions except for deletion of 'Exclusive use of aircraft' category.

Approved on basis of estimates provided by the operators that the discount fares will generate additional traffic and improve profitability.

N.N.—8863997

NOTICE OF CESSATION OF A STATUTORY LIEN IN RESPECT OF CERTAIN AIRCRAFT

Notice is hereby given that pursuant to section 75 (1) of the *Civil Aviation Act 1988*, a Statutory Lien vested in the Authority ceased to have effect in respect of each of the aircraft described hereunder.

<i>Lien No.</i>	<i>Description and registration mark</i>	<i>Date on which lien ceased to have effect</i>

Community Services and HealthCOMMONWEALTH OF AUSTRALIA
*Health Insurance Act 1973***ORDER UNDER SUB-SECTION 6 (1)**

I, COLIN JOHN BAILEY, delegate of the Minister for State for Community Services and Health, in accordance with the powers vested in the Minister under sub-section 6 (1) of the *Health Insurance Act 1973* (the Act) hereby declare that every person in the following class of persons, namely those persons visiting Australia for the principal purpose of participating in 'Moondani', the 4th Australian Ranger gathering to be held at 'Orana', Roches Beach, Tasmania from 14 to 21 January 1989, being persons who, but for sub-section 6 (1) of the Act would not be eligible persons for the purposes of the Act, shall be treated as eligible persons for the purposes of the Act for the period 12 to 23 January 1989 inclusive.

Dated this thirty-first day of August 1988.

COLIN JOHN BAILEY
Delegate of the Minister
of State for Community Services
and Health

COMMISSION*Conciliation and Arbitration Act 1904***NOTICE UNDER SUB-SECTION 49A (3) IN
RELATION TO VARIATION OF A COMMON RULE**

In the matter of the

DRAUGHTSMEN, PLANNERS AND TECHNICAL
OFFICERS (AUSTRALIAN CAPITAL
TERRITORY) AWARD 1982

C No. 31475 of 1988

And in the matter of the variation of the award dated
8 December 1982 in the above matter.

Notice is hereby given:

- that on 31 August 1988 the Commission varied the terms of the above mentioned award referred to in the schedule as set out in the Schedule;
- that the variation will be a common rule in the Australian Capital Territory in the industry in respect of which the dispute arose with effect from 18 January 1988; and
- that any person or organisation having an objection to the variation binding that person or organisation and desiring to be heard in relation to that objection is invited to lodge with the Commission a notice of that objection within 28 days after the date specified in paragraph (a).

A copy of the award may be inspected at the office of the Registrar. Objections should be lodged with the Registrar at 4th Floor, CML Building, University Ave, Canberra, by 4.30 p.m. on 28 September 1988.

**Industry, Technology and
Commerce****ANTI-DUMPING AUTHORITY****NOTICE OF INQUIRY INTO IMPORTS OF
CEMENT CLINKER FROM THE REPUBLIC OF
KOREA**

The Minister for Science, Customs and Small Business has been advised of a preliminary finding by the Australian Customs Service that there are sufficient grounds for the publication of a dumping duty notice sought in respect of imports of cement clinker from the Republic of Korea.

The Minister, acting under section 9 of the Anti-Dumping Authority Act, has now requested the Authority to consider and report on this matter. The Authority intends to make its report no later than 30 December 1988.

Interested parties are invited to make submissions to the Authority as soon as possible, but certainly not later than 11 October 1988. Submissions should preferably address specific matters raised in the Australian Customs Service's report on its preliminary finding. Copies of that report can be obtained from the Office Manager, Dumping Control, Canberra by telephoning (062) 75 6060.

The Authority is currently considering the nature of the inquiry process which it might adopt, but it is likely that, upon receipt of all submissions, a meeting of parties will be arranged to explore issues raised and that after that meeting a further opportunity will be afforded for parties to make submissions to the Authority on these issues.

The Authority also intends to adopt the 'public file' system used by Customs and explained in Australian Customs Notice number 87/169. Briefly, this means that a submission containing confidential information should be accompanied by another version, omitting the confidential material but containing a non-confidential summary of it, which can be made available to other parties to the inquiry. Three copies of each version are required.

For further information regarding the Authority's inquiry please telephone (062) 76 2458.

COMMONWEALTH OF AUSTRALIA
Customs Act 1901

Notice No. 88/13

NOTICE UNDER SECTION 151

I, COLIN FELICE VASSAROTTI, Manager, Tariff in pursuance of paragraph (c) of sub-section (6) of section 151 of the *Customs Act 1901*, do by this notice determine, in relation to New Zealand, that the following materials shall be manufactured raw materials:

Lindane technical
Azinphos ethyl technical
Polyurethane spandex yarn.

Notice No. 80/8 signed on 18 December 1980 and published in the *Commonwealth of Australia Gazette* No. G1 of 6 January 1981 is hereby revoked.

This determination is effective from 1 September 1988.
Dated this 25th day of August 1988.

COLIN VASSAROTTI
Manager, Tariff

N.N.—8864037

Customs Act 1901

**NOTICE OF INTENTION TO PROPOSE CUSTOMS
TARIFF (COAL EXPORT DUTY) ALTERATION**

Notice No. 1 (1988)

In pursuance of section 273EA of the *Customs Act 1901*, I, ERROL RONALD LESLIE DIXON, delegate of the Comptroller-General of Customs, hereby give notice that is intended within seven sitting days of the House of Representatives after the date of publication of this notice in the *Gazette*, to propose in the Parliament a Customs Tariff (Coal Export Duty) alteration in accordance with the particulars specified in the Schedule to this notice.

This notice shall operate in respect of coal exported from Australia on and from 1 July 1988.

THE SCHEDULE

Alteration to the *Customs Tariff (Coal Export Duty) Act 1975* (hereinafter referred to as the 'Principal Act').

Section 7 of the Principal Act is amended by inserting after subsection (2) the following subsection:

"(2A) Where a Collector is satisfied that high quality coking coal consists:

(a) in part of:

(i) a blend of coal from a mine referred to in subsection (3); or

(ii) coal from a mine referred to in subsection (4); being a blend of coal that, or coal that, if it were not mixed with coal from another mine would, under subsection (3) or (4), be wholly exempt from the duty of Customs imposed by this Act; and

(b) in part of coal from a mine or mines other than the mine from which is produced the blend of coal, or the coal, to which paragraph (a) applies;

then, without limiting, by implication, the operation of subsection (2) or of this subsection in respect of coal from a mine to which paragraph (b) applies, that part of the high quality coking coal referred to in paragraph (a) is exempt from the duty of Customs imposed by this Act."

Dated this 8th day of September 1988.

E. R. L. DIXON

Delegate of the
Comptroller-General of Customs

**PROPOSED VARIATION OF THE SERVICE AREA OF THE COMMERCIAL
TELEVISION LICENCE FOR TNT LAUNCESTON TO INCLUDE KING ISLAND**

I, Dennis James McLennan, an officer authorised by the Minister of State for Transport and Communications for the purposes of paragraph 85(5)(b) of the Broadcasting Act 1942 (the Act), give notice under that paragraph:

- (a) that the Minister proposes to direct the Australian Broadcasting Tribunal under sub-section 85(4) of the Act to vary the service area of the commercial television licence held by TNT Launceston to include the Local Government Area of King Island; and
- (b) that representations may be made to the Minister in relation to the proposed direction by not later than 12 October 1988

Representations should be addressed to me, Mr D J McLennan, Assistant Secretary, Station Planning Branch, Department of Transport and Communications, GPO Box 594, Canberra ACT 2601.

Maps outlining the existing service area and the proposed service area may be obtained from the Station Planning Branch of the Department of Transport and Communications by telephoning (062) 64 4248.

**AUSTRALIAN BROADCASTING TRIBUNAL
RENEWAL OF A COMMERCIAL TELEVISION
LICENCE TO SERVE NORTHERN TASMANIA—
TNT LAUNCESTON**

The Australian Broadcasting Tribunal has commenced an inquiry into the application by Northern Television Pty Limited for the renewal of the licence TNT9 Launceston Tasmania. The licence is due to expire on 19 December 1988.

The issues to be considered in the inquiry is whether the Tribunal should refuse to renew the licence for any of the reasons set out in s. 86 (11B) of the *Broadcasting Act 1942*, and in particular:

- (a) whether the licensee has complied with its undertakings to provide an adequate and comprehensive service pursuant to the licence, and to use and encourage the use of Australia's creative resources;
- (b) whether the licensee is no longer a fit and proper person to hold the licence;
- (c) whether the licensee has the necessary financial, technical and management capabilities;
- (d) whether a condition of the licence has not been complied with;
- (e) whether the service is commercially viable.

If you wish to make a submission to the inquiry on any of these matters, you should lodge it with the Tribunal's North Sydney office by 5.00 p.m. on 26 October 1988.

Before lodging a submission, you should inspect the inquiry file (containing the application and other useful background information) and read the Tribunal's *Guide for Submitters* (copies are available from the Tribunal and are attached to the inquiry file).

The file can be inspected during business hours at the Tribunal office:

Tandem House
76 Berry St
North Sydney
Contact officer, Ian Laird
Telephone (02) 959 7886
and at:

Northern Regional Library
Civic Sq
Launceston Tas.

Monday, Tuesday, Wednesday 9.30 a.m. to 6.00 p.m.
Thursday, Friday 9.30 a.m. to 9.00 p.m.
Saturday 10.00 a.m. to 12.00 noon

(Inquiries to be made with Reference Librarian)

**AUSTRALIAN BROADCASTING TRIBUNAL
LICENCE RENEWALS—COMMERCIAL RADIO
STATIONS 2UW and 2SM SYDNEY
NOTICE OF COMMENCEMENT OF INQUIRIES**

Submissions invited

The Australian Broadcasting Tribunal has commenced inquiries into the renewal of the licences for the above stations, which are due to expire on 31 December 1988.

Applications for the renewal of the licences have been lodged by Commonwealth Broadcasting Corporation Pty Ltd, licensee of 2UW, and Radio 2SM Pty Ltd, licensee of 2SM.

The issue to consider in each of the inquiries is whether the Tribunal should refuse to renew the licences for any of the reasons set out in sub-section 86 (11B) of the *Broadcasting Act 1942*, and in particular:

- (a) whether the licensee has complied with its undertakings to provide an adequate and comprehensive service pursuant to the licence, and to use and encourage the use of Australian creative resources;

- (b) whether the licensee is no longer a fit and proper person to hold the licence;
- (c) whether the licensee has the necessary financial, technical and management capabilities to operate the station effectively;
- (d) whether a condition of the licence has not been complied with;
- (e) whether the service is commercially viable.

If you wish to make a submission relating to either or both of the inquiries on any of these matters, you should lodge it with the Tribunal's North Sydney office by 5.00 p.m. on Wednesday, 26 October 1988.

Before lodging a submission, you should inspect the inquiry files (containing applications and other useful background information) and read the Tribunal's *Guide for Submitters*, copies of which are available from the Tribunal and are attached to each inquiry file.

The inquiry files can be inspected during business hours at the Tribunal's offices at:

Tandem House

**AUSTRALIAN BROADCASTING TRIBUNAL
LICENCE RENEWAL—COMMERCIAL TELEVISION
SERVICE NTD-8 DARWIN, NORTHERN
TERRITORY**

The Australian Broadcasting Tribunal has commenced an inquiry into the renewal of the licence for the above service, which is due to expire on 30 December 1988.

An application for renewal of the licence has been lodged by Territory Television Ltd.

The issues to be considered in the inquiry is whether the Tribunal should refuse to renew the licence for any of the reasons set out in s. 86 (11B) of the *Broadcasting Act 1942*, and in particular:

- (a) whether the licensee has complied with its undertakings to provide an adequate and comprehensive service pursuant to the licence, and to use and encourage the use of Australian creative resources;
- (b) whether the licensee is no longer a fit and proper person to hold the licence;
- (c) whether the licensee has the necessary financial, technical and management capabilities;
- (d) whether a condition of the licence has not been complied with;
- (e) whether the service is commercially viable.

If you wish to make a submission to the inquiry on any of these matters, you should lodge it with the Tribunal's North Sydney office by 5.00 p.m. on 28 October 1988.

Before lodging a submission, you should inspect the inquiry file (containing the application and other useful background information) and read the Tribunal's *Guide for Submitters* (copies are available from the Tribunal and are attached to the inquiry file).

The inquiry file can be inspected during business hours at the Tribunal's North Sydney office at Tandem House, 76 Berry Street, North Sydney (contact officer, Steve Kelen (02) 959 7885) and at

Northern Territory State Reference Library
25 Cavanagh St
Darwin

Broadcasting Act 1942

AUSTRALIAN BROADCASTING TRIBUNAL

SHARE TRANSACTION

**QINTEX GROUP ACQUISITION OF COMMERCIAL
TELEVISION SERVICES ATN-7 SYDNEY, HSV-7
MELBOURNE, AND BTQ-7 BRISBANE**

Notice of Inquiry

Submissions Invited

The Australian Broadcasting Tribunal has received applications from two wholly owned subsidiaries of Universal Telecasters Limited (UTL).

- (i) Quetzal Pty Ltd for approval of its acquisition of 100 per cent of HSV-7 Melbourne
- (ii) Santolina Pty Ltd for approval of its acquisition of 100 per cent ATN-7 Sydney, and BTQ-7 Brisbane.

UTL is a member of the QINTEX group of companies. The three television licences involved in this transaction were previously owned by the Fairfax group.

The Tribunal has commenced an inquiry which will consider both these applications jointly. Applications have also been received from others who have acquired a prescribed interest in these licences.

The issues which will be addressed during the inquiry are as follows:

1. Whether the Tribunal should refuse approval, having regard to:
 - (a) whether the giving of approval would be contrary to a provision of the Act;
 - (b) whether it would be advisable in the public interest to refuse approval on the grounds that the applicants:
 - are not fit and proper persons to hold these licences;
 - (ii) do not have the financial, technical and management capabilities necessary to provide the services to which the licences relate; or
 - (iii) are not otherwise capable of complying with the conditions of the licence;
 - (c) whether the circumstances are such that, if the Tribunal gave approval:
 - (i) the Tribunal would have reasonable grounds for believing that a person would be contravening the multiple interest or cross media limits (s92 and/or 92FAB) in circumstances which would constitute an offence;
 - (ii) a person would be contravening the multiple or cross-media directorship limits (s. 92C or 92FAD);
 - (iii) a condition specified in s.92D would be contravened (foreign ownership); and
 - (d) matters relating to the undertakings given by the licensees that they will provide an adequate and comprehensive service pursuant to the licence and encourage the provision of programs wholly or substantially produced in Australia, and use and encourage the use of Australian creative resources in and in connection with the provision of programs.
2. Such other matters relevant to the inquiry as the Tribunal sees fit.

Any person wishing to make a submission on these issues may lodge it with the Tribunal by 26 October 1988.

Before you lodge a submission, it would assist you to inspect the relevant inquiry file (containing the application and other useful background information) and read the Tribunal's Guide for Submitters (copies are available from the Tribunal and are attached to the inquiry files). Background papers on the transactions may be obtained and inquiry files can be inspected during business hours at the following addresses:

**REVIEW OF THE CHILDREN'S AND PRESCHOOL
CHILDREN'S TELEVISION STANDARDS**

NOTICE OF NEW ISSUES—SUBMISSIONS INVITED

The Australian Broadcasting Tribunal hereby gives notice pursuant to Regulation 12 of the Australian Broadcasting Tribunal (Inquiries) Regulations of the new issues to be considered in its inquiry to review the children's and preschool children's television standards.

The issues to be considered in this inquiry now include:

- (1) the appropriate amount of C programs and preschool programs to be broadcast on any day;
- (2) the appropriate time(s) of the day for the broadcasting of such programs;
- (3) the provisions which should apply to the displacement of C time by live coverage of a major sports event or an event of national importance;
- (4) the provisions which should apply to the broadcasting of advertisements during or immediately before and after C time or preschool time;
- (5) the appropriate provisions which should apply for the regulation of Australian content of children's and preschool children's programs. The following matters will be looked at in this context:
 - (i) should there be a C drama quota? and
 - (ii) if so, what should it be?
 - (iii) should regulation for children's programming require:
 - (a) a specified number of hours for each station over a certain period?
 - (b) a specified sum of money to be spent on children's programming by each station over a certain period?
 - (c) a condition on each commercial licence?
 - (d) some other means?
 - (iv) should C drama continue to contribute bonuses to any general drama quota/s?
 - (v) should there be a quota or specific regulation for the different age groups within the 'children's' category? e.g. preschool, 6-9 yrs, 10-12 yrs or sub-teens.
 - (vi) should there be regulation for diversity? e.g. an arts quota, documentary quota or for a range of dramatic forms?
 - (vii) should regulation take into account differing qualities of production?
 - (viii) does the Provisional C classification assist producers to obtain investment for a proposed program?

- (ix) does the C Station of Origin classification encourage local production of children's programs?
 - (x) if the points system for Australian television programs remains should C or C Drama programs continue to attract additional credit points?
 - (xi) how would regulation contribute to an improved quality of Australian children's programs?; and
- (6) any other manner in which the standards should be amended.

These issues cover all the children's television standards, including those relating to Australian content. The Australian Content issues were previously considered in the Australian Content on Commercial Television Inquiry. The issues were canvassed in that inquiry's discussion papers on the Regulation of Children's Programs and Australian Drama on Commercial Television. Submissions have been received and as a result it has now been decided to consider these issues in the Review of the Children's and Preschool Children's Television Standards (CTS/PTS) inquiry rather than in the Australian Content on Commercial Television inquiry.

The Division for the Review of the CTS/PTS inquiry will take into consideration all relevant submissions and other documents from the Australian Content inquiry.

Further submissions are invited on these issues. Any person wishing to make a submission should lodge it with the Tribunal by 30 September 1988.

Inquiry files for both the Review of the CTS and PTS and The Australian Content Inquiry are held in the Tribunal's state offices; the Department of Transport and Communications library, Canberra; the State Reference Library, Darwin; and the State Library of Tasmania, Hobart.

N.N.—8864050

COMMONWEALTH OF AUSTRALIA

Telecommunications Act 1975

DETERMINATION OF RENTALS AND CHARGES

I, JOHN ANDREW LOCKWOOD, the General Manager, Specialised Network Products of the Australian Telecommunications Commission, being a person to whom the Commission has by instrument in writing under section 33 of the *Telecommunications Act 1975*, delegated its powers and functions under the Act, in pursuance of section 11 of the Act, hereby make the following determinations:

1. The determination of rentals and charges made by the Commission on the 21 August 1975*, as varied to date†, is further varied by adding after subparagraph (f) (ii) of Item 6 of Schedule 1 the following:

- '(g) A subscriber to an Auspac Transend service shall pay rental at an annual rate as follows:

- (i) in respect of each point to point circuit provided between a terminal access point and the Auspac Transend network, where transaction charges outlined in sub-paragraph (i) (i) are payable by the subscriber:

	\$
- 1200 bits per second	1047.00
- 2400 bits per second	1133.00
- (ii) in respect of each point to point circuit provided between a terminal access point and the Auspac Transend network, where transaction charges out-

- lined in sub-paragraph (i) (ii) are payable by the subscriber:
- 1200 bits per second 874.00
 - 2400 bits per second 960.00
- (iii) in respect of multipoint circuits provided between the terminal access points and the Austpac Transend network, where transaction charges outlined in sub-paragraph (i) (i) are payable by the subscriber, a fee per access point:
- 1200 bits per second
 - first terminal access point 147.00
 - each additional access point 219.00
 - 2400 bits per second
 - first terminal access point 1133.00
 - each additional access point 219.00
- (iv) in respect of multipoint circuits between the terminal access points and the Austpac Transend network, where transaction charges outlined in sub-paragraph (i) (ii) are payable by the subscriber, a fee per access point:
- 1200 bits per second
 - first terminal access point 874.00
 - each additional access point 219.00
 - 2400 bits per second
 - first terminal access point 960.00
 - each additional access point 219.00
- (v) in respect of access from a terminal access point to the Austpac Transend network being provided by a standard telephone service, where transaction charges outlined in sub-paragraph (i) (i) are payable by the subscriber, a fee per access point:
- 1200 bits per second 959.00
 - 2400 bits per second 1094.00
- (vi) in respect of access from a terminal access point to the Austpac Transend network being provided by a standard telephone service, where transaction charges outlined in sub-paragraph (i) (ii) are payable by the subscriber, a fee per access point:
- 1200 bits per second 780.00
 - 2400 bits per second 869.00
- (vii) notwithstanding the above, where more than 20 percent of the terminal access points connecting a subscriber's Austpac Transend service are in non-metropolitan areas, for each additional percentage point of terminal access points located in non-metropolitan areas, a further annual fee of \$6.60 shall apply.
- (h) An applicant for an Austpac Transend service shall pay a connection fee for terminal access points as follows:
- (i) for each terminal access point in respect of a point to point access network, or for the initial access point in a multipoint access network—436.00
 - (ii) in respect of a multipoint access network for each terminal access point in addition to the initial terminal access point—109.00
- (i) A subscriber to an Austpac Transend service shall pay in respect of transactions processed by the service, the following:
- (i) a charge per transaction of 1.2 cents, or
 - (ii) a charge based on the annual number of transactions processed by the subscriber's service, calculated as follows:
 - where less than 50 million transactions, a charge per transaction—0.036
 - where greater than 50 million, but less than 100 million transactions:
 - a charge for the initial 50 million transactions—1 800 000.00
 - for transactions in excess of 50 million, a charge per transaction—0.03
 - where greater than 100 million, but less than 150 million transactions:
 - a charge for the initial 100 million transactions—3 300 000.00
 - for transactions in excess of 100 million, a charge per transaction—0.024
 - where greater than 150 million, but less than 200 million transactions:
 - a charge for the initial 150 million transactions—4 500 000.00
 - for transactions in excess of 150 million, a charge per transaction—0.018
 - where greater than 200 million transactions:
 - a charge for the initial 200 million transactions—5 400 000.00
 - for transactions in excess of 200 million, a charge per transaction—0.012
- (j) In addition to a charge prescribed in paragraph (i), a subscriber to an Austpac Transend service for which access to the service is provided by a standard telephone service shall pay a fee in respect of each call to the service ascertained by reference to the charge prescribed in sub-paragraph (a) (i) of Item 2 of Schedule 1, with respect to each chargeable period of 171 seconds.
- (k) In respect of each call made from a standard telephone service to the Austpac Transend network, the caller shall pay a fee as prescribed in sub-paragraph (a) (i) of Item 2 of Schedule 1.
- (l) A subscriber to an Austpac Transend service shall pay charges as follows for each additional network address provided to a terminal access point:
- a connection fee 25.00
 - annual rental 25.00
- (m) Where a subscriber to an Austpac Transend service elects to undertake the role network management, the following charges shall apply:
- (i) for a standard network management package involving the provision of one serviced access facility for every 2000 terminal access points:
 - a connection fee 150 000.00
 - annual rental 100 000.00
 - (ii) for the provision of each additional service access facility to that prescribed in sub-paragraph (m) (i):
 - annual rental 8 000.00
- (n) Where the Commission performs the role of network management, a subscriber to an Austpac Transend service shall pay an annual fee per terminal access point of \$131, except where the subscriber's network comprises less than 1000 terminal access points and is provided by the Commission on the basis of a contract period not exceeding two years, in which case, an annual fee per terminal access point of \$33 shall apply.
- (o) For the purposes of this Item, 'Austpac Transend' means a network service designed for the purpose of facilitating financial transactions processing, a 'terminal access point' is a network termination designated to permit access to the Austpac Transend network.
2. This determination shall take effect on and from 1 September 1988.
- Dated this twenty-ninth day of August 1988.

SPECIAL

CODE OF PRACTICE FOR THE SAFE REMOVAL OF ASBESTOS

National Occupational Health and Safety Commission Act 1985

Section 38

CODE OF PRACTICE

Pursuant to sub-section 38(1) of the *National Occupational Health and Safety Commission Act 1985*, the National Occupational Health and Safety Commission hereby declares the following *Code of Practice for the Safe Removal of Asbestos*.

NOTE

The *Draft Code of Practice for the Safe Removal of Asbestos* is included in the National Occupational Health and Safety Commission's publication: *Asbestos: Code of Practice and Guidance Notes*, AGPS, Canberra, 1988. This publication also includes: *Guide to the Control of Asbestos Hazards in Buildings and Structures* and *Guidance Note on the Membrane Filter Method for Estimating Airborne Asbestos Dust*, both of which are referred to throughout the Code.

INTRODUCTION

This Code of Practice outlines the basic principles which should be followed in selecting the most suitable technique for the safe removal of asbestos-based thermal or acoustic insulation including friable asbestos boards, and is aimed at minimising the concentration of airborne asbestos fibre.

This Code is directed at specific removal jobs such as those involving the removal of the sprayed asbestos coatings used for thermal and acoustic insulation in buildings and the extensive asbestos-based lagging on boilers and other industrial plant. It is not intended that procedures outlined in the main body of the Code should cover work involving asbestos-cement (fibro) products and floor tiles containing asbestos.

The work practices and precautions to be adopted in the safe removal of asbestos-based products vary considerably with the type of product, amount of asbestos, its condition and location. The objective of this Code is to provide a guide to good current practice which may be adapted to the particular circumstances of the removal job. Because the work practices for the handling of asbestos-cement (fibro) products differ from those applicable to thermal insulating, the safe working practices for these materials have been presented in a separate section of this Code.

This Code has been compiled with reference to the current NH&MRC⁽¹⁾, OSHA⁽²⁾ and HSC⁽³⁾ codes of practice for the removal of asbestos and is designed to be read in conjunction with the attached *Guide to the Control of Asbestos Hazards in Buildings and Structures*, where the more general aspects of asbestos and its potential hazards are outlined.

1. PLANNING AND PROGRAMMING CONSIDERATIONS

As removal of asbestos-containing insulating material by an approved removalist is often done by contract or tender, it is essential that the precise nature of the work to be done is understood by both contractor and client. Any misunderstanding may lead to the contractor utilising removal procedures which endanger the health of his/her employees, neighbouring workers and local residents and may jeopardise his/her removal licence.

1.1 INFORMATION TO BE SUPPLIED BY CLIENT

The client must supply precise details of the removal requirements to the asbestos removalist prior to commencement of any removal work; however, it is recognised that in some cases the full extent of the asbestos material is not always known until after the removal is under way. Some materials may be inaccessible, or concealed in such a way that some removal has to be carried out before the asbestos is detected.

In the preparation of job specifications the following considerations should be addressed:

- (a) Location -
 - . indoors
 - . outdoors but protected
 - . outdoors exposed to weather
 - . enclosed in ducts or trenches below ground level
 - . difficult or unusual site conditions which will influence the selection or application of removal methods, particularly in regard to transport, scaffolding or weather protection
- (b) Technical description of material to be removed, with details of type of asbestos present and any special or unusual materials.
- (c) Dimensions of surfaces. Where these are adequately detailed on drawings, preferably coloured to indicate areas for removal, provision of copies of the drawings may be sufficient. Otherwise, information of the following nature will be required:
 - . surface dimensions of flat or large curved areas, and thickness of insulation
 - . external diameters of pipes
 - . length of each size pipe
 - . number and type of pipe fittings, for example, flanged joints, valves, tees, expansion bends
 - . particular detail is to be provided if asbestos is to be removed from any part of the building's air conditioning system
- (d) Details of any pipework sections that are steam or electrically heated and the arrangement of its insulation.
- (e) Details of any section or materials to be left in place.

- (f) Confirmation and details of residual heat that will remain in pipework, boilers, turbines or refinery equipment.
- (g) Any unusual or specific hazards associated with the removal job.
- (h) Temperature considerations (4) -
 - . normal working temperature for each portion of the plant concerned
 - . ambient temperature at the removal area
- (i) Conditions of substrate surfaces - special requirements, such as the removal or otherwise of protective paint or lacquer from pipework or for the application of paint or other protective coatings to the substrate from which the asbestos-based material has been removed.
- (j) Types of fittings and supports and whether or not these may be removed or disposed of with the waste.
- (k) Type of finish required.
- (l) Special service requirements; for example, where there is any potential hazard from contact with live electrical equipment in use in the removal area, attention should be drawn to this fact.
- (m) Where electrical switch gear or panels are to be sealed, consideration should be given to the provision of supplementary ventilation to dispose of potential heat build-up and consequent fire risk.
- (n) Site occupancy restrictions and conditions.
- (o) Adjacent area cleaning (adjacent areas which are to be cleaned or are to be protected from airborne dust and are to be cleaned on completion).
- (p) Safety practices to be followed under relevant legislation.
- (q) Location of any relevant electrical cables.

1.2 INFORMATION TO BE SUPPLIED BY THE APPROVED REMOVALIST

Information pertaining to the relevant sections of 1.1, and how the removalist proposes to undertake the removal program.

If required, the approved removalist should provide specifications or drawings showing details as follows:

- (a) Type and extent of isolation required at the asbestos removal area and location of restricted access barriers.
- (b) Particular methods to be adopted when removing material, including detail of the contamination control program, for example -
 - . provision of negative air pressure and the location of the exhaust unit
 - . location of decontamination unit
- (c) Waste disposal program -
 - . storage on-site

- . storage in bin on-site
 - . removal from building (using an isolated lift)
- (d) Waste disposal site and approval from relevant local disposal authority.
- (e) Shapes and sizes of temporary buildings required by the removalist, together with particulars of water, light and power requirements.

1.3 GUIDELINES FOR PLANNING AND PROGRAMMING

Frequently, the approved removalist's operations are dependent upon progress of other contractors at the site. It is therefore recommended that the asbestos removalist be provided with details of planning schedules which will control his/her work and allow him/her to effect removal without other personnel being present in the asbestos removal area. Conversely the work of other contractors needs to be scheduled to preclude them working near to, or accidentally breaking into, the asbestos removal area.

The following are the major points to which early consideration should be given:

- (a) Safety of personnel.
- (b) Identification of types of asbestos involved.
- (c) Program of commencement and completion dates. However, it should be recognised that unforeseen problems with removal or the extent of the asbestos cannot always be ascertained prior to removal work commencing.
- (d) Responsibility for the supply and application of isolating materials; for example, ropes, barriers, plastic screens, waste containers and warning signs.
- (e) Preparation of surfaces (pre-removal) cleaning.
- (f) Areas to be left free of insulant on a temporary or permanent basis.
- (g) Precise information on extent of work covered by contract.
- (h) Limitations of access to removal area.
- (i) Conditions of employment on the site, including the labour and supervision required and agreed working hours.
- (j) Transport facilities.
- (k) Protected storage area pending the removal of asbestos-based materials.
- (l) Availability of water, power, heat, light and drainage.
- (m) Accommodation, decontamination and canteen facilities.
- (n) Provision of access equipment, such as scaffolding or ladders.
- (o) Protection of adjacent plant and machinery.
- (p) Waste disposal responsibilities and clean-up requirements.
- (q) Temporary sealing of asbestos where necessary.

- (r) Notification to, and approval from, regulating authorities where necessary.
- (s) Responsibility for air monitoring.
- (t) Cleanliness standards which must be achieved to fulfil the contract.

1.4 TRAINING

Prior to engagement in the work, all asbestos removal workers shall be instructed in the relevant aspects of asbestos health hazards, safe working procedures, and the wearing and maintenance of protective clothing and equipment. The quality of this training could be assessed as one of the stages in determining whether an asbestos removalist is sufficiently experienced to undertake the removal.

The degree of training should be appropriate to the trade and function of the individual within the organisation and should be sufficiently detailed to ensure that the individual understands not only the procedural and safety requirements, but also the reasons for these requirements.

1.5 SUPERVISORY PERSONNEL

Supervisory personnel shall have a detailed knowledge of the precautions and procedures outlined in this Code and, in the light of this knowledge and personal experience, shall assume the following responsibilities:

- . to plan the total removal procedure; the pre-removal setting up, the actual removal and final cleaning operation
- . to select the most appropriate technique for removal of asbestos
- . to ensure that all necessary measures are taken to reduce the airborne concentration of asbestos dust, and that in any case, workers are not exposed to levels exceeding the recommended exposure standard
- . to arrange for, and assess results of, air monitoring where appropriate
- . to ensure that all workers under his/her supervision are adequately trained in the safe working practices outlined in this Code
- . to ensure that the removal is continually supervised and that the operation is carried out in a safe and proper manner, in accordance with the precautions listed in this Code
- . to ensure that personal protective equipment is maintained in good condition
- . to ensure that the removal site is maintained in a clean condition, that waste is quickly and properly disposed of, and that the personal hygiene procedures are continually observed

2. PREPARATION OF THE REMOVAL SITE FOR A MAJOR REMOVAL PROGRAM

In preparing the removal site, a number of considerations must be addressed. These include the method of containment of the removal area and whether complete enclosure is possible, the provision and location of decontamination and changing facilities, and the precautions which must be implemented to prevent the spread of asbestos contamination away from the removal area. Each of these aspects is discussed in turn in the following sections.

2.1 DETERMINATION OF ASBESTOS REMOVAL AREA WHERE TOTAL ENCLOSURE IS NOT POSSIBLE

In some instances such as in large power stations or other industrial plant, it may not be possible to provide an enclosure around the asbestos removal area. In these circumstances the boundaries of the asbestos removal area shall be determined by assessment of supervisory staff; however, the boundary would not normally be less than ten metres from the asbestos workface unless an existing barrier is already in place. This distance may be decreased or increased on the basis of air monitoring results for asbestos dust.

The boundary of the removal area shall be defined by barrier, rope or rail and by appropriately placed signs indicating that it is an asbestos removal area. The signs shall be state:

ASBESTOS WORKING AREA - NO UNAUTHORISED ENTRY

RESPIRATORY PROTECTION ESSENTIAL

Static air sampling may be necessary to confirm the suitability of the selected boundaries. Experience will generally enable supervisory staff to quickly determine and set boundaries for most types of removal.

Entry to the removal area shall be restricted to personnel directly engaged in the asbestos removal. Other persons entering the area will be required to observe the appropriate safety precautions for that area. All dirty work clothing, tools, equipment and bagged waste materials should be properly decontaminated before being removed. Those items that cannot be decontaminated through a decontamination unit should be plastic wrapped and sealed and only opened in another removal area.

2.2 SITE PREPARATION FOR ASBESTOS REMOVAL FROM BUILDINGS AND OTHER STRUCTURES

Where total enclosure of the removal area is possible, isolation of the area can be achieved by the installation of plastic sheeting (approximately 0.2mm thick) on the floor and walls of the structure. It may be necessary to erect a temporary timber or metal frame to which the plastic barrier can be attached. All joints shall be overlapped (by approximately 200mm) and double taped to ensure the area is completely sealed off. In some circumstances the use of adhesives may supplement the use of tape.

Existing floor coverings should be removed where practicable. A double layer of plastic sheeting, (suitably fixed by double-sided tape or adhesive to prevent movement between layers), should be used on the floor of the containment area, and a turn-up of 300mm should be used where the floor joins the sidewalls. Extra strength in the containment floor can be achieved by running the double layers of plastic at 90° to

each other. 'Duct tape' or 'plastic wrapping tape' is preferable to 'masking tape' when sealing plastic sheeting.

Where asbestos is removed from an entire floor of a multi-storey building, all passenger elevators shall be prevented from stopping at the floor from which asbestos is being removed. Removal workers may gain access to the floor via the fire stairs or from an elevator dedicated for this purpose.

All movable furniture, plant and fittings should be removed from the asbestos removal area. The immovable items should be fully wrapped and sealed in suitable plastic sheeting so that they are effectively isolated from the removal area. In regions of heavy traffic or high wear, additional masking or barricading may be necessary.

Where masking operations may liberate asbestos fibres, all persons in the removal area shall wear respiratory protective equipment approved for asbestos. This precaution is particularly applicable when removing existing barriers or partitions such as false ceiling tiles. Where asbestos materials have fallen on to a false ceiling, the ceiling should only be removed under full removal conditions. Any utility or service line which penetrates into the ceiling space should be sealed up when it is located if it cannot be sealed from outside the removal area.

Aside from specific asbestos extraction units, all ventilation and air-conditioning networks servicing the removal area must be closed down for the duration of the removal job. All vents must be thoroughly masked to prevent the ingress of asbestos dust into the duct network. Upon completion, and after final cleaning of the removal area, all mechanical ventilation filters for recirculated air should be replaced if possible.

Additional care should be taken to ensure that asbestos dust cannot escape at points where pipes and conduits pass out of the removal area. Greater attention to masking and compliance testing is required in these regions, particularly if service riser-shafts pass through the removal area.

To prevent the escape of airborne asbestos dust from the removal area enclosure, an exhaust extraction fan shall be installed in a position so as to create a negative air pressure of approximately 12Pa (water gauge) within the removal area. In this arrangement, the major and usually only route of air into the removal area would be through the decontamination unit.

The air extracted by this system must pass through an appropriate High Efficiency Particulate Air (HEPA) filter to remove any asbestos dust. Ideally, air extraction units should be so situated that access to the filters can be gained from the removal area; however, the unit is kept outside the removal area. This expedites the otherwise difficult decontamination of these units and allows another unit to be brought into service in the event of a breakdown. Where it is not possible to change the filter within the removal area, a temporary enclosure should be constructed around the unit during the filter replacement.

The HEPA filter must comply with the minimum 99.97 per cent efficiency requirement detailed in Australian Standard 1324.⁽⁵⁾ A coarse pre-filter should be installed prior to the HEPA filter to prolong the useful life of the high efficiency filter. Where practicable, the discharge point for this extraction unit should be to the outside air, distant from other working areas, air-conditioning inlets or breathing air compressors.

EXTRACTION EQUIPMENT SHALL BE OPERATED CONTINUOUSLY WHILST THE REMOVAL ENCLOSURE IS IN PLACE.

The most satisfactory method for assessing the integrity of the filter and seal fittings is by regular inspection, in conjunction with a static pressure alarm which indicates a failure in the system.

Air monitoring of the exhaust from the extraction unit is a specialised procedure for which the Membrane Filter Method (6) is unsuitable because the results obtained may not truly reflect the actual fibre concentration in the exhaust air. Non-isokinetic sampling may give false negative results which may lead to unwarranted confidence in the filter integrity.

WHEN INSTALLING THE ASBESTOS REMOVAL AREA CONTAINMENT, EXTRA CONSIDERATION MUST BE GIVEN TO THE ALTERATION OF THE FIRE RATING OF THE BUILDING AND TO THE PROVISION OF FIRE FIGHTING FACILITIES, EMERGENCY EXITS AND EMERGENCY LIGHTING.

2.2.1 Compliance testing of removal area containment prior to commencement of work

Before any asbestos removal begins in an enclosure, a non-toxic smoke generator should be used to test the integrity of the removal area enclosure, prior to the operation of the extraction unit.

A visual inspection of the enclosure shall also be carried out at the beginning of each working period. Any defect revealed during inspection shall be remedied immediately. Where necessary, provision for air monitoring shall be made.

2.3 DECONTAMINATION FACILITIES

In many instances, the only satisfactory method of providing appropriate changing facilities is by the provision of a mobile or specially constructed on-site unit. The decontamination facility should be sited immediately adjacent to, and joined to, the enclosed asbestos removal area. This unit can be divided into three distinct regions, namely:

- (a) *DIRTY DECONTAMINATION AREA*
- (b) *CLEAN DECONTAMINATION AREA*
- (c) *CLEAN CHANGING AREA*

These areas should be separated by means of a suitable airlock or buffer zone. Normally this airlock would consist of spring loaded doors or two or more overlapping sheets of plastic sheet positioned so as to define the boundary between each segment of the decontamination facility, whilst allowing personnel access and airflow towards the removal area. To ensure a good airflow through the unit where doors are used to segment the decontamination unit, large openings with a hinged flap to operate as a one-way valve should be provided.

Generally no more than six persons should use the one decontamination facility. A diagrammatic view showing an example of the arrangement of this facility is presented in Figure 2.

The *DIRTY DECONTAMINATION AREA* should have provision for:

- . vacuum cleaning or hosing down of contaminated clothing and footwear
- . storage of contaminated clothing and footwear
- . airflow towards the removal area
- . a shower area with an adequate supply of warm water

The *CLEAN DECONTAMINATION AREA* should have provision for:

- . storage of individual respirators in containers or lockers
- . airflow towards the dirty decontamination area
- . a shower area with an adequate supply of warm water

The *CLEAN CHANGING AREA* should have provision for:

- . storage of clean clothing
- . separate storage of clean and dirty towels
- . airflow towards the clean decontamination area

All water from the decontamination facility should pass through a suitable filter or other trap before it passes into sewer mains.

PROCEDURES FOR THE USE OF DECONTAMINATION FACILITIES ARE DETAILED IN SECTION 5.1.1 OF THIS CODE.

FIGURE 2
AN ARRANGEMENT FOR
A DECONTAMINATION FACILITY
(an example)

2.4 CHANGING FACILITIES WHERE A DECONTAMINATION UNIT IS INAPPROPRIATE

For operations involving the removal of small amounts of asbestos and where the decontamination facilities described earlier are inappropriate, an arrangement shall be adopted to ensure that protective clothing used for asbestos work shall not be worn away from the immediate vicinity of the asbestos removal area.

Normally this would entail the worker removing his/her outer protective garments and overshoes in a designated area attached to the removal area, and then proceeding directly to the changing and showering facilities. The discarded protective clothing should be stored in appropriate sealed containers at the removal area. Respirators should be worn whilst removing the outer protective garments and must be worn until after showering and then stored in containers or lockers.

Changing facilities should be made available for the exclusive use of persons working in an asbestos removal area. Separate storage provision should be made for portable equipment, respirators, clothing and other such materials used in the course of asbestos removal.

Where a permanent changing facility is necessary (for example in larger power stations or dockyards), the changing room shall have separate sections, designated as dirty or clean as appropriate, with clothes lockers in each.

3. EQUIPMENT FOR ASBESTOS REMOVAL

3.1 CUTTING TOOLS

Breaking through the finishing compound and cutting the reinforcing wire in the lagging are operations which can liberate considerable quantities of dust. Care should therefore be taken in the selection of tools and in keeping the insulation wet. Tools should allow cutting of the insulation into small sections while keeping dust levels in the removal area to a minimum.

Power, telephone and fire alarm cables may lie underneath asbestos insulation. These cables must be clearly identified prior to the commencement of any cutting, as severe damage and/or hazard to the worker could result.

Service lines under insulation, particularly on turbines, are vulnerable to damage from cutting tools. Alternate routing, cabling or deactivation of such lines suggested.

The use of any power tool in asbestos removal requires caution since not all types are suitable, particularly in regard to internal dust collection and electrical safety in wet conditions. In general, compressed air driven power tools are preferable. Where doubt exists, reference should be made to the State regulatory authority.

3.2 SPRAY EQUIPMENT

Surface soaking from a spray jet is useful for small areas and where total saturation is not practicable. The spray could be from an adjustable, pistol-grip, garden hose spray, fed from a mains supply or, where no supply is readily available, from a portable pressurised vessel, such as a pump-up garden sprayer. A constant water pressure is desirable.

3.3 TOTAL SATURATION EQUIPMENT

Total saturation equipment is useful for large areas of insulation where time can be allowed for the water to soak in. The equipment consists of an injection harness of light rubber hose with a number of outlets, each terminating in an injection head with its own shut-off control. These heads have numerous side holes through which water is fed into the insulation. The water flow is stopped during transfer of the head from one position to the next.

The heads are moved progressively at 200 to 300mm intervals as the insulation soaks, until the asbestos matrix is wet. A water pressure of approximately 170 kPa (25 psi) is desirable. This can be achieved by tapping a higher pressure source through a reducing valve.

FIGURE 3 TOTAL SATURATION INJECTION HEAD

3.4 VACUUM CLEANING EQUIPMENT

All vacuum cleaning equipment used in association with asbestos removal shall conform with the requirements of the appropriate Australian Standard⁽⁷⁾ and shall be approved for this purpose by the relevant State authority. In particular, all extracted air must pass through a HEPA filter before discharge into the atmosphere.

3.5 WASTE DISPOSAL EQUIPMENT

The selection of appropriate containers for the removal of asbestos waste, and its subsequent disposal, is detailed in section 13 of the attached Guide.

3.6 INSPECTION OF EQUIPMENT

All equipment used for the removal of asbestos-based material shall be inspected before commencement of the removal job, after repair and at least once in every seven days where continually used.

A register containing details of the examination, state of equipment and repair (if any) is to be maintained by a designated person.

4. REMOVAL TECHNIQUES FOR BUILDINGS AND STRUCTURES

The removal of asbestos-based materials from buildings and other structures shall be carried out by methods which will minimise the release of asbestos dust into the atmosphere, both during and after the removal operation. The choice of method is determined by the nature of the asbestos material, the quantity of insulant and its location.

As the techniques used for the removal of sprayed thermal insulation from buildings are not dissimilar from those used for removal from steampipe and boilers, the following removal methods may equally be adapted to the removal of asbestos from industrial plant and machinery.

4.1 SPRAY METHOD

This method shall be used only where relatively small quantities of asbestos-based materials are to be removed and where the following conditions apply to the material:

- . the asbestos-based material is not covered with other materials such as calico or metal cladding which require prior removal
- . there is no reinforcing wire or other similar restrictions to removal
- . the asbestos-based material is not coated with paint or mastic
- . where rapid temperature drop due to excessive water could cause damage to heated metal components
- . where no live electrical conductors are present and where no damage to electrical equipment can arise from the ingress of water

The spray shall be applied in such a manner as to ensure that the entire surface of asbestos-based materials is wet, but minimal run-off occurs.

In many instances, it will be helpful if a wetting agent (surfactant) is added to the water to facilitate more rapid wetting of the insulation material.

It is desirable for the asbestos-based material to be wetted through its full depth and maintained in a wet condition. It is recommended that a manually controlled, consistent low pressure, coarse spray such as from an adjustable, pistol-grip garden hose be used for this purpose (see section 3.2). The design of the spraying equipment will be dependent on availability of water supply and access to the area to be sprayed.

It is important that the spray should be copious, but not such that the water droplets generate dust from impact with the surface of the insulation. When using cutting equipment to remove asbestos, the water spray should be directed at the site of the cut and the wetted material removed as the cut progresses.

The wetted asbestos-based material should be removed in sections and immediately placed in suitably labelled containers and properly sealed. Any small sections which may be dislodged should be collected and properly disposed of.

Dust is significantly suppressed, although not entirely eliminated by this technique; therefore appropriate respiratory protection must be used.

4.2 REMOVAL BY SOAKING OR TOTAL SATURATION

The quantity of asbestos-containing insulation to be removed from pipes or ducts is often so extensive, or the material so thick, that the spray method will not suppress the dust sufficiently. An alternative is to soak the insulation by the introduction of water through appropriate applicators. The design and usage of these water injection devices is detailed in section 3.3 of this Code.

The soaking of the asbestos-based materials may start as soon as metal temperatures permit; however, where metal cracking could occur, the metal must be allowed to cool to a suitable temperature.

The following steps are recommended for the soaking procedure:

- . where the asbestos-based material is covered by cloth, mastic or other such materials, loose asbestos-based dust or other nuisance dust shall be removed by vacuum cleaning with approved equipment or by wiping with a damp cloth.
- . where cladding has to be removed before access is obtained to the asbestos-based material, the cladding shall be removed carefully and surfaces vacuum cleaned continually or, where practicable, sprayed with water.
- . holes or cuts must be made in the outer covering to enable water to be injected in such a manner and quantity as to ensure that asbestos-based material is wetted but not washed out by the passage of water. It has been found that slow saturation from the metal interface outwards is quite successful.
- . the quantity of water and the time to soak will be dependent on factors such as thickness of insulation, access, location of holes.
- . the saturated asbestos-based material shall be removed in sections and immediately placed in properly labelled containers and suitably sealed. During this process, it may be necessary to carefully cut reinforcing wire or similar restraints. The asbestos-based material shall be properly soaked, and small sections which may be dislodged shall be properly disposed of.
- . although sufficient water is needed to saturate the asbestos material, excess water may create contamination and waste disposal problems. All waste water must be filtered to remove dust prior to discharge into sewer mains.

4.3 DRY REMOVAL

THIS METHOD IS CONSIDERED TO BE THE LEAST DESIRABLE REMOVAL TECHNIQUE AND SHALL ONLY BE USED WITH PRIOR APPROVAL FROM THE RELEVANT STATUTORY AUTHORITY AND WHERE THE SPRAY AND SOAKING METHODS CANNOT BE USED. Such may be the case where there are live electrical conductors or where major electrical equipment could be permanently damaged or made dangerous by contact with water.

Notwithstanding the general guidance given earlier in this Code, the greater potential for the generation of airborne asbestos dust in dry removal techniques demands that particular attention be given to the following points:

- . the work area shall be fully isolated with impermeable sheeting and the interior maintained at a slight negative pressure, using approved exhaust equipment.
- . all personnel involved in the removal operation must wear full-face, positive pressure, supplied air respirators.

- asbestos-based material shall be removed in small pre-cut sections with minimum disturbance in order to reduce the generation of dust. Waste material shall be immediately placed in appropriate wetted containers.

- in some cases it may be possible to use local exhaust extraction to minimise airborne dust concentrations. In order to achieve the required efficiency, a minimum air velocity at the extraction point of 1 m/s is recommended and the area of the nozzle should be large enough and placed close enough (not greater than diameter of nozzle) to ensure efficient dust collection.⁽⁸⁾ Filtration must be sufficiently complete to permit the return of air to the workplace (see section 3.4).

4.4 REMOVAL FROM HOT METAL

Removal of asbestos from hot metal presents one of the worst conditions of removal due to the spread of dust on convection currents of air. Wherever possible, sufficient time should be given to allow the machinery to cool to below 100°C before removal is attempted. However, if this is not possible owing to system requirements, then extreme care is essential.

In using the dry removal method on hot surfaces, particular care shall be taken in the selection of dust extraction equipment to cope with the convection currents involved. The selection of appropriate personal protective clothing also becomes more important.

4.5 TECHNIQUES FOR SMALL REMOVAL JOBS

4.5.1 Use of glovebags

Glovebags are single use bags constructed from transparent, heavy duty polyethylene, with built-in arms and access ports. Generally these glovebags are approximately 1 metre wide by 1.5 metres deep and are designed to completely isolate small removal jobs from the general working environment. As such, glovebags provide a flexible, easily installed and quickly dismantled, temporary enclosure for small asbestos removal jobs.

THIS TECHNIQUE IS THEREFORE PARTICULARLY SUITED TO THE REMOVAL OF ASBESTOS LAGGING FROM INDIVIDUAL VALVES OR JOINTS IN STEAMPIPE OR OTHER SIMILAR LOCATIONS. THERE ARE A VARIETY OF COMMERCIAL BAGS WHICH ARE SUITABLE FOR THIS PURPOSE.

The major advantage of these glovebags is that they contain all waste and contamination within the bag, thereby eliminating the need for extensive personal protective equipment and decontamination. The only significant limitation to the use of glovebags is the volume of waste material that they may contain. As such, care needs to be exercised to prevent overfilling with water or waste.

The correct technique for the use of glovebags is as follows:

- the glovebag shall be installed so that it completely covers the pipe or other structure where asbestos work is to be done. The pipe lagging on either side of the bag must be sufficiently sound to support the weight of the bag and its wet contents. Glovebags are installed by cutting the sides of the glovebag to fit the size of the pipe from which asbestos is to be removed. The glovebag is attached to the pipe by folding the open edges together and securely sealing them with tape. All openings in the glovebag must be sealed with duct tape or equivalent material. The bottom seam of the glovebag must also be sealed with duct tape or equivalent to prevent any leakage from the bag that may result from a defect in the bottom seam.

- . employees using glovebags must as a minimum, wear a half-face respirator fitted with particulate cartridges approved for asbestos. This precaution is taken in case the bag is punctured or a leak develops from a poor seal.
- . the asbestos material from the pipe or other surface that has fallen into the enclosed bag must be thoroughly wetted with a wetting agent (applied with an airless sprayer through the pre-cut port provided in most glovebags, or applied through a small hole cut in the bag).
- . once the asbestos material has been thoroughly wetted, it can be removed from the pipe, beam or other surface. The choice of tool used to remove the asbestos material depends on the nature of the material to be removed. Asbestos-containing materials are generally covered with painted canvas and/or wire mesh. Canvas may be cut and peeled away from the asbestos-containing material underneath. Where the asbestos-containing material is dry, it should be re-sprayed with a wetting agent to ensure that it generates as little dust as possible when removed.
- . after removal of the asbestos-containing material, the pipe or surface from which asbestos has been removed must be thoroughly cleaned with a wire brush and wet-wiped until no traces of the asbestos-containing material can be seen. In addition, the upper section of the bag should be washed down to remove any adhering asbestos materials.
- . any edges of asbestos-containing insulation that have been exposed as a result of the removal or maintenance activity must be encapsulated with a sealing compound to ensure that these edges do not release asbestos dust to the atmosphere after the glovebag has been removed.
- . once the asbestos removal and encapsulation have been completed, a vacuum hose from an approved vacuum cleaner should be inserted into the glovebag through the access port to remove any air in the bag that may contain asbestos dust. Once the bag has been evacuated, it should be squeezed tightly (as close to the top as possible), twisted, and sealed with tape, keeping the asbestos materials safely in the bottom of the bag.
- . the vacuum line can then be removed from the bag and the glovebag itself removed from the workplace to be disposed of properly.

FIGURE 4
USE OF GLOVE BAGS

4.5.2 Mini-enclosures

In some instances, such as removal of asbestos from a small ventilation system or from a short length of duct, a glovebag may not be either large enough or of proper shape to enclose the item. In such cases, a mini-enclosure can be built around the area where small-scale, short-duration asbestos maintenance or removal work is to be performed.

The mini-enclosure should be constructed from polyethylene sheeting (approximately 0.2mm thick) and can be small enough to restrict entry to the asbestos removal area to one worker. The plastic sheeting shall be affixed to the walls of the room or other existing or temporary supports, and a double layer of plastic shall be laid on the floor. As with the larger structures discussed earlier, adequate overlap should be given where the walls and floor are joined. The two layers on the floor should be secured to minimise movement between layers. Care must also be taken to ensure that any penetrations such as pipes or conduits are properly sealed.

Constructed as part of the mini-enclosure are two small, approximately 1 metre square changing rooms. The changing area should be separated from the removal area by double, overlapping layers of plastic. A similar arrangement should also separate the dirty changing area from the clean changing area outside the enclosure. This arrangement is presented diagrammatically in Figure 5 on the following page.

While inside the mini-enclosure, the worker should wear disposable coveralls, overshoes and appropriate respiratory protection. Upon leaving the removal area part of the enclosure, the worker should vacuum down his/her coveralls, removing them in the dirty changing area section of the enclosure. After leaving the enclosure, the worker should shower and then remove respiratory equipment before changing into fresh clothing.

In this application, an airline respirator would be inappropriate, as the worker must wear his/her respirator on the journey from the removal area to the shower.

The advantages of mini-enclosures are that they limit the spread of asbestos contamination, reduce the potential exposure of bystanders and other workers who may be working in adjacent areas, and are quick and easy to install. The disadvantage of mini-enclosures is that they may be too small to contain the equipment necessary to create a negative pressure within the enclosure; however, the double layer of plastic sheeting separating the removal and changing areas will serve to restrict the release of asbestos dust from the enclosure.

The procedures to be followed in dismantling the mini-enclosure are the same as those outlined for larger enclosures in section 8 of this Code.

FIGURE 5

LAYOUT OF A MINI-ENCLOSURE
FOR ASBESTOS REMOVAL

5. GENERAL HYGIENE REQUIREMENTS

Persons working with asbestos materials shall observe a high standard of hygiene and good housekeeping to ensure that asbestos dust is not taken from the asbestos removal area to other environments.

Persons leaving a removal area shall first go through the decontamination procedures appropriate for that site. The more detailed procedures for decontamination are detailed in the following sub-section of this Code.

In general, persons involved in asbestos removal shall be provided with changing facilities separate from those used by other groups of workers. Clean overalls, outer clothing and dirty overalls shall be segregated.

WORK CLOTHING SHALL NOT BE TAKEN HOME AND UNDER NO CIRCUMSTANCES SHOULD OUTER CLOTHING WORN IN THE REMOVAL AREA BE WORN AWAY FROM THE REMOVAL AREA.

PERSONS SHALL NOT EAT, DRINK OR SMOKE IN THE ASBESTOS REMOVAL AREA as this would require the removal of respirators, potentially exposing workers to high concentrations of asbestos dust.

5.1 DECONTAMINATION PROCEDURES

In circumstances where the decontamination unit cannot be located adjacent to, and joined to, the removal area enclosure, procedures to minimise asbestos contamination shall be implemented. Usually this would require workers to discard their coveralls and overshoes or other outer garments in an isolated changing area attached to the removal area enclosure, and thereafter change into fresh outer clothing for the journey to the decontamination facility.

Where use is made of these temporary changing facilities at the removal area, de-dusting must be carried out before the protective equipment is placed in the dust-proof accommodation provided.

5.1.1 Personnel

Persons leaving an asbestos removal area shall first ensure that protective clothing and footwear are thoroughly cleaned of adhering gross contamination by vacuuming with an approved vacuum cleaner, or by hosing down with water, prior to entering the decontamination unit. **REMOVING DUST FROM CLOTHING BY SHAKING OR BLOWING OFF WITH COMPRESSED AIR IS FORBIDDEN.**

Following this initial cleaning, the worker must shower fully clothed in the **DIRTY DECONTAMINATION AREA**, with respirator worn and operating. After showering, the wet clothing is removed and placed in the storage provided.

The worker then passes through the buffer zone or airlock and removes his/her respirator whilst showering in the **CLEAN DECONTAMINATION AREA**. The discarded respiratory equipment is then stored in a locker or other appropriate enclosure. Where airlines are brought through the decontamination facility, provision should be made to wash the airline and enclose the end in plastic once it is disconnected from the respirator mask.

During the final shower, the worker must pay particular attention to washing of hair, face and fingernails.

Following this final shower, the worker passes through the second airlock or buffer zone into the *CLEAN CHANGING AREA*. Here the worker changes back into his/her conventional work clothing stored in the lockers provided.

Personnel must not smoke, eat or drink in any part of the decontamination facility.

Part of the responsibility of the removal supervisor is to ensure that provision is made for routine cleaning of the decontamination facility, disposal of discarded coveralls and overshoes, and the laundering of wet garments and towels.

5.1.2 Equipment

All tools and electrical equipment such as vacuum cleaners and power tools should be left in the removal area until the completion of the removal job. When the equipment is removed it should be vacuumed thoroughly and all accessible surfaces wiped over with a damp cloth. Where decontamination is not possible, the item should be plastic wrapped and sealed, and only opened in another removal area.

6. PROTECTIVE CLOTHING AND EQUIPMENT

When the use of respiratory equipment and protective clothing is required, adequate rest breaks should be provided for, taking into account the physical strain caused by the use of such equipment.

Accordingly, consultation between employers and employees should establish a normal work/rest regime to be followed in the particular circumstances depending on factors such as the type of protective equipment and method of work.

6.1 RESPIRATORY PROTECTION

The degree of respiratory protection required is determined by the nature of the removal job, the type of asbestos and the potential for exposure to dust.

A DETAILED GUIDE TO THE SELECTION OF APPROPRIATE RESPIRATORY PROTECTION FOR VARIOUS OPERATIONS INVOLVING ASBESTOS IS PRESENTED IN APPENDIX B OF THIS CODE.

For minor removal jobs, especially when removing asbestos-cement (fibro) sheets or using glovebags, an *approved* disposable respirator or half-face respirator fitted with particulate cartridges should be worn. Alternatively, *approved* air-purifying ventilated helmet or visor respirators can be used.

During masking of a removal area or during final cleaning where there is potential for exposure to airborne asbestos, the use of an *approved* disposable particulate respirator would suffice. These conditions would NOT apply inside the removal area during other asbestos removal operations.

In general, positive pressure, hood or full-facepiece powered air-purifying respirators with Class M filters or positive pressure demand compressed airline respirators shall be worn by all personnel directly engaged in asbestos removal operations inside a removal area enclosure. Inspection and supervisory personnel, not physically engaged in the removal operation, may use powered air-purifying respirators fitted with appropriate particulate filters when working in the removal area.

The air supply equipment for airline respirators shall be located outside and distant from the work area and must be maintained in good order to avoid interruption in the air supply or deterioration in the quality of the breathing air.

Audible and visual warning of compressor failure shall be provided to warn operators of any system malfunction. The air supply equipment shall be of sufficient capacity to allow time for personnel to clear the removal area if a supply failure occurs.

Powered, air-purifying respirators must be designed, or shielded, so that their operation is not degraded by water from showering.

ALL RESPIRATORY PROTECTIVE EQUIPMENT USED IN ASBESTOS REMOVAL WORK MUST CONFORM TO THE REQUIREMENTS OF AUSTRALIAN STANDARDS^(9,10) AND BE APPROVED BY THE RELEVANT STATE OR TERRITORY AUTHORITY FOR THIS PURPOSE.

The asbestos removalists and/or supervisor must be familiar with the aforementioned Australian Standards and shall ensure the provisions contained therein are adhered to at all times. Arrangements shall be made for regular inspections and servicing of non-disposable respirators.

Respirators shall be issued on a personal basis. Users shall receive instructions on the correct method of using respirators and the importance of good facial fit. The user's name shall be clearly marked on all non-disposable respirators.

It is the employer's responsibility to ensure that all protective equipment is maintained in a clean and safe working condition. Where a number of different respirator types are suitable and available, individual operators may express a preference for a particular type.

6.1.1 Faceseal

Persons wearing spectacles or persons with beards, sideburns or even a visible growth of stubble, may not be afforded adequate protection from asbestos dust where the respirator worn relies on a good faceseal, that is, a close contact between face and seal.

A complete solution to the problem of facial hair, or the wearing of spectacles involves the use of equipment which does not require a faceseal, for example, ventilated helmet respirators, or positive pressure powered respirators with blouses.

If there is any doubt as to the adequacy of protection, individuals concerned should not be permitted to work in asbestos removal areas.

6.2 PROTECTIVE CLOTHING

Asbestos does not enter the body through the skin, and has no harmful effect on the skin. Thus removal of asbestos itself does not call for the wearing of any special skin covering, although any asbestos deposited on the skin and in the hair must be scrubbed off before leaving the decontamination area.

The selection of protective clothing is therefore determined not by asbestos exposure but by climate, degree of physical exertion required, the other hazards involved in the work, and ease of decontamination.

Closely woven, disposable or washable coveralls without pockets or cuffs, but including an integral head covering, in combination with disposable overshoes, greatly assist in personal decontamination; however, these synthetic garments may make a substantial contribution to the heat stress of the individual in some environments. Trousers and coverall cuffs should be worn outside of boots and gloves. Where specific decontamination facilities are not available, the use of disposable coveralls is recommended.

As several variables influence the type and amount of clothing worn in asbestos removal, decisions on what is appropriate in the particular circumstances should always be based on consultation between employers and employees.

6.2.1 Laundering of protective clothing

All clothing worn in an asbestos removal area shall be regarded as potentially contaminated with asbestos. As such, it is important that care is taken to ensure that the contractor, or other persons handling the clothing, fully understand the precautions necessary for handling asbestos-contaminated clothing. It is generally considered preferable that, where possible, all laundering be done on-site or in a facility provided and operated by the asbestos removalist.

Contaminated clothing may be safely laundered in a conventional washing machine separate from other laundry, provided the clothing is thoroughly wetted when discarded by the worker and not allowed to dry out until it is washed. Contaminated clothing to be laundered by a commercial laundry shall be despatched in a thoroughly

wetted state in an impermeable container clearly marked **ASBESTOS CONTAMINATED CLOTHING**.

Where clothes dryers are used to dry work clothes and/or overalls, the exhaust air from the unit should either pass through a filter or be discharged to the outside atmosphere. Random air monitoring may be carried out in the laundering facility to ensure laundry workers are not being exposed to asbestos dust.

THE LAUNDERING OF PROTECTIVE OR WORK'S CLOTHING IN WORKERS' HOMES SHALL BE STRICTLY PROHIBITED.

7. ENVIRONMENTAL MONITORING OF REMOVAL SITE

An airborne asbestos monitoring program is necessary in order to determine whether the precautions and work procedures described in this Code are being applied in a satisfactory manner, and that permitted asbestos exposure levels are not exceeded.

Air monitoring is not intended to be used as a preventive or control measure, but as a check at intervals, which may be random, in order to ensure that control procedures are operating satisfactorily and that workers are not being exposed to harmful environments.

The location and frequency of air monitoring is very much dependent upon the method of removal, the quality of the removal area containment, the monitoring history at the particular site and the possible consequences of fugitive releases. For larger removal areas or on dry removal jobs, a fairly extensive monitoring program should be implemented at the start of the removal program to check the integrity of the containment and decontamination facilities.

The need for further monitoring and its frequency should be determined on the basis of the results obtained. Problem areas, or neighbouring regions with a high occupancy of unprotected persons, should be monitored routinely every shift, while consistently clear areas may only require a random sample.

The recommended exposure standard for asbestos and its basis is outlined in section 6.2 of the attached Guide.

During asbestos removal operations, where complete containment of the removal area is not possible (section 2.1), asbestos fibre concentrations in the air shall be measured at a number of positions outside the barriers which contain the removal area. Such data are important in determining the positions of barriers and the effectiveness of the control procedures. Air monitoring shall also be done in decontamination areas. Generally, it will not be necessary to monitor each individual job where asbestos material is being removed by the same procedure and where the monitoring history has indicated that there has been no problem with asbestos contamination.

7.1 AIR MONITORING TECHNIQUE

The determination of airborne asbestos concentrations shall be made in accordance with the detailed method set out in the NOHSC *Guidance Note on the Membrane Filter Method for Estimating Airborne Asbestos Dust*.⁽⁶⁾

Briefly, this determination is achieved by drawing an accurately measured volume of air through a specially prepared membrane filter, and thereafter counting the number of asbestos fibres collected on this filter, using an optical microscope. This data can then be used to calculate a result which may be compared to the recommended exposure standard detailed in section 6.2 of the attached Guide. **COMPARISON WITH THIS EXPOSURE STANDARD IS ONLY VALID IF THE DETAIL OF THIS METHOD IS OBSERVED.**

'Static' air samples taken over a short period at a fixed location can only serve as an indicator of the effectiveness of contamination control. Comparisons between samples taken for engineering control and the recommended exposure standard are not valid. True worker exposure can only be estimated from personal samples attached to, and taken within, the breathing zone of the individual. These personal samples should preferably extend over an entire shift.

Since the measurement of airborne asbestos concentration is an important and highly skilled process, the monitoring shall only be carried out by suitably trained personnel who have been instructed in the sampling techniques and analytical procedures.

It should be noted that the Membrane Filter Method is the only technique which can be used to determine compliance with the asbestos exposure standard, and where monitoring is undertaken to this end, it must be done by that method and should be performed by National Association of Testing Authorities, Australia (NATA) registered or government accredited personnel, when available. However, because of the four-hour sampling period required, and the subsequent time needed for sample preparation and counting, it may not be of sufficiently informative value during the course of, for example, short-term asbestos disturbance, control, or removal operations. In such circumstances more reliance should be placed upon frequent visual inspection of the containment area.

The results of air monitoring shall be made available to workers in the area, and the site supervisor notified immediately if the fibre count exceeds the recommended level.

8. DISMANTLING OF ASBESTOS REMOVAL AREA

On completion of the asbestos removal job, all tools and equipment not used for cleaning should be removed from the removal area so that efficient vacuuming of the inside of the removal area enclosure can be undertaken. In taking these tools and equipment from the removal area, appropriate decontamination procedures must be observed (section 5.1.2).

By spraying the internal surfaces of the plastic containment around the removal area with polyvinyl acetate (PVA) or similar water based paint, any asbestos dust adhering by electrostatic attraction is effectively encapsulated. Personnel involved in this spraying operation should wear an airline respirator or a half-face respirator fitted with combined organic vapour/dust cartridges. Plastic surfaces may become very slippery while the paint is wet, so unnecessary movement within the enclosure should be avoided until the paint has dried.

The plastic enclosure surrounding the removal area may only be dismantled if a thorough inspection reveals no visible traces of asbestos contamination and air samples taken within the enclosure indicate a result below the level specified by the relevant statutory authority. The visual assessment may, in some circumstances, include analysis of settled dust within the enclosure by optical microscopy. Air monitoring should only be undertaken once the PVA has dried, as the airborne mist will adversely affect the ability to detect fibres in the sample.

It should be stressed that visual inspection and air monitoring are complementary techniques and dismantling may only proceed after both techniques give clearances.

The sealing plastic may then be dismantled, folded and placed in appropriate disposal bags and sealed. The sealing plastic should not be re-used, but treated as asbestos waste, [see section 12 of the attached Guide]. Safety barricades and warning signs should not be removed until the complete area has been thoroughly cleaned.

Prior to resumption of normal work in the area by unprotected personnel, a comprehensive visual inspection shall be undertaken to ensure removal has been satisfactorily completed and that no source of asbestos dust remains in the area. Particular attention should be paid to examination of ledges, tops of air conditioning ducts, cracks in the floor, folds in plastic sheeting and crevices or areas which may have been overlooked during the initial clean-up.

The asbestos removal job shall only be considered to have been completed when a visual inspection reveals no further evidence of asbestos contamination and static air samples give a clear result.

9. HANDLING OF ASBESTOS-CEMENT (FIBRO) PRODUCTS⁽¹¹⁾

A large number of building products used in the building and construction industry in Australia have been compounded from asbestos-cement. These products include, but are not limited to:

- . flat or corrugated, compressed asbestos-cement sheeting (fibro)
- . fibro pipes - water, drainage and flue
- . roofing shingles
- . flexible building boards (for example, Villaboard, Hardiflex, Wundaboard, Flexiboard)

While new fibrous-cement products no longer contain asbestos, prior to 1970 crocidolite was used in many products. Provided these products are maintained in good order, they present no health risk; however, precautions must be observed during structural alteration or demolition involving asbestos-cement materials.

9.1 PRECAUTIONS TO BE OBSERVED WHEN WORKING WITH ASBESTOS-CEMENT PRODUCTS

In general, work procedures should be designed to minimise the generation of dust and, where possible, action should be taken to avoid the spread of any asbestos dust contamination. In particular, the following practices should be adopted:

- . use non-powered hand tools such as hand-saws, as these generate a smaller quantity of predominantly coarser dust or waste chips.
- . wetting down the material further reduces the release of dust when cutting. High pressure water jets shall not be used.
- . *POWER TOOLS UNLESS APPROVED BY THE RELEVANT STATUTORY AUTHORITY FOR ASBESTOS WORK, AND ABRASIVE CUTTING OR SANDING DISCS, IN PARTICULAR, SHALL NOT BE USED ON ASBESTOS-CEMENT PRODUCTS.*
- . work with asbestos-cement products in well-ventilated areas, and where possible, in the open air.
- . good work hygiene principles should be observed. This may entail the use of plastic drop sheets to collect off-cuts and coarse dust or the use of approved vacuum cleaning equipment. Where it is necessary to sweep floors, the area involved should be wetted to suppress dust.
- . all off-cuts and collected dust should be disposed of as asbestos waste.
- . approved respiratory protection should be used when appropriate, particularly in confined spaces.

9.2 REMOVAL OF ASBESTOS-CEMENT (FIBRO) SHEETING

The following precautions should be observed when removing asbestos-cement roofing, wall sheeting or other fibro products from buildings or other structures:

- . all windows and doors on the building should be closed, or in factory-type buildings where there is no ceiling, the area below or adjacent to the work should be roped off.
- . the asbestos-cement sheets should be sealed or wetted with water, but not with high pressure water jets. The sheets should not be wetted if this creates a high risk of a worker slipping from a roof.
- . workers should wear disposable coveralls and either an approved disposable respirator or an approved half-face respirator mask fitted with dust cartridges approved for asbestos.
- . only power tools approved by the appropriate statutory authority for asbestos work may be used for removal.
- . asbestos-cement sheets should be removed with minimal breakage and should be lowered to the ground, **not dropped**.
- . the removed sheets should be stacked on a ground sheet and not allowed to lie about the site where they may be further broken or crushed by machinery or site traffic.
- . all asbestos-containing waste should be kept wet, wrapped in plastic or otherwise sealed and removed from the site as soon as practicable, using covered bins or on a covered truck.
- . the asbestos-containing waste should be disposed of in a manner, and at a site, approved by the appropriate disposal authority. Asbestos-cement sheets should not be re-used.
- . any asbestos-cement residues remaining in the roof space or around the removal area should be cleaned up, using an approved vacuum cleaner if necessary.

LEGISLATION

Legislation relevant to asbestos has been introduced, or is being introduced, in all States and Territories. Other legislation relates to clean air, waste disposal and so on.

At the time of publications the relevant Acts and regulations are:

NEW SOUTH WALES

APPENDIX B

GUIDE TO THE SELECTION OF APPROPRIATE RESPIRATORY PROTECTION

APPROPRIATE RESPIRATORS

There is a wide range of respiratory protection available for protection from airborne asbestos dust. In general, the selection of a particular respirator is determined by the nature of the asbestos work and the probable maximum concentrations of dust that would be encountered in this work. Another consideration would be the personal characteristics of the wearer that may affect the facial fit of the respirator; for example, amount of facial hair, or whether glasses are worn.

Table 2 below provides, in approximate order of increasing efficiency, an indication of some respirators which may be used for protection against asbestos dust. The protection afforded by each device depends not only upon the design and fit of the respirator, but also upon the efficiency of the filters (L,M,or H) where applicable.

Australian Standards AS-1715⁽⁹⁾ and AS-1716⁽¹⁰⁾ provide detailed advice on the selection, use and maintenance of respiratory protective equipment and should be consulted for more detailed advice on *Nominal Protection Factors* and other relevant matters.

TABLE 2

<u>FIGURE</u>	<u>TYPE OF RESPIRATOR</u>
6	. disposable, half-face particulate respirators
7	. half-face, particulate filter (cartridge) respirator
8	. powered, air-purifying, ventilated helmet or hood respirator
9	. full-face, particulate, filter (cartridge) respirator
10	. full-face, powered air-purifying particulate respirator
11	. full-face, positive pressure demand respirator
12	. full suit or hood, continuous flow, airline respirator

**GUIDE TO PROBABLE EXPOSURE LEVELS AND APPROPRIATE RESPIRATORY
PROTECTION FOR PARTICULAR ASBESTOS REMOVAL JOBS**

Adapted from the Health and Safety Executive (UK) publication: *Respiratory Protective Equipment for Use Against Asbestos*^(12,13) with changes in nomenclature to suit Australian practice.

(Reproduced with permission of the HSE and the Controller of Her Majesty's Stationery Office).

<u>CONCENTRATION</u> (fibres/mL)	<u>JOB</u>	<u>EQUIPMENT</u>
0 to 2	simple short sampling; simple enclosure erection; clearance sampling; but <u>not</u> for use for removal of insulation or use inside enclosures when removal is in progress.	any <i>approved</i> respirator, including disposable or half-face cartridge respirators (Class L or M)
2 to 4	some sampling operations; perhaps enclosure erection under adverse conditions; but <u>not</u> for use for removal of insulation or use inside enclosures when removal is in progress.	any <i>approved</i> respirator with Class M filters except those fitted with or consisting of half-face masks; or any positive pressure airline respirator.
4 to 20	extensive sampling operations perhaps on friable lagging; some sealing operations; enclosure erection under adverse conditions and on friable lagging, but <u>not</u> for use for removal of insulation or use inside enclosures when removal is in progress.	any <i>approved</i> full-face respirator fitted with Class H filters, or any positive pressure demand or continuous flow airline respirator.

TABLE 3 (Continued)

<u>CONCENTRATION</u> (fibres/mL)	<u>JOB</u>	<u>EQUIPMENT</u>
0 to 180	. certain forms of wet stripping in which wetting is prolonged and effective, certain small-scale dry stripping operations.	any approved, full-face, (Class H) powered air purifying or airline respirator. <u>Ventilated helmet or visor respirators are not appropriate</u>
180 to 500	. certain forms of dry stripping; ineffective wet stripping (light wetting - no time given to saturate).	any approved <u>positive-pressure</u> full-face, airline or powered air purifying (Class H) respirator. <u>NO LESSER RESPIRATOR WILL SUFFICE</u>
500 +	. dry stripping in confined areas.	positive pressure, airline supplied suits or hoods only. <u>NO LESSER RESPIRATOR WILL SUFFICE</u>

NOTE: This guide does not take account of personal features such as facial hair or the need to wear spectacles. Full protection will not be achieved if either of these is present and interferes with the face seal. Nor does the guide take any account of misuse of the protective equipment.

TABLE 4

**GUIDE TO PROBABLE EXPOSURE LEVELS AND APPROPRIATE
RESPIRATORY PROTECTION FOR PARTICULAR JOBS INVOLVING
ASBESTOS-CEMENT (FIBRO) PRODUCTS**

Adapted from the Health and Safety Executive (UK) publication: *Respiratory Protective Equipment for Use Against Asbestos*,^(12,13) with changes in nomenclature to suit Australian practice.

(Reproduced with permission of the HSE and the Controller of Her Majesty's Stationery Office).

<u>CONCENTRATION</u> (fibres/mL)	<u>JOB</u>	<u>EQUIPMENT</u>
0.5 to 5	construction - machine drilling, hand sawing and water jetting* of asbestos-cement; perhaps other processes also.	disposable or half-face particulate cartridge respirators (Class L or M)
10 to 50	cutting asbestos-cement board with circular saws, angle grinders or abrasive wheel cutters which do not have efficient local extraction*.	any approved full-face particulate Class H respirator including high efficiency powered air purifying respirators.

***NOTE:** The high pressure water jetting or dry machining of asbestos-cement products with power tools is not recommended.

REVOCATION BY THE QUEEN OF ASSIGNMENTS OF
CERTAIN POWERS TO THE GOVERNOR-GENERAL

ELIZABETH THE SECOND, by the Grace of God Queen of
Australia and her other Realms and Territories, Head of
the Commonwealth,

GREETING:

WHEREAS section 2 of the Constitution of the
Commonwealth of Australia makes certain provision for
the exercise by the Governor-General of such powers and
functions of the Queen as Her Majesty may be pleased to
assign to the Governor-General:

AND WHEREAS section 61 of the Constitution provides that
the executive power of the Commonwealth is vested in the
Queen and is exercisable by the Governor-General as the
Queen's representative:

AND WHEREAS any powers and functions assigned under
section 2 of the Constitution should not include powers
exercisable by the Governor-General under section 61:

NOW THEREFORE We hereby revoke the instruments given by
Us on 2 November 1954 and 20 May 1973, to assign to the
Governor-General powers and functions in respect of the
following matters:

- (a) the appointment of Ambassadors Extraordinary and
Plenipotentiary to represent the interests of
Australia and the termination of appointments of
Ambassadors Extraordinary and Plenipotentiary
representing the interests of Australia;
- (b) the appointment of High Commissioners to represent
the interests of Australia in states within the
Commonwealth of Nations but not included in Our
Realms and Territories, and the termination of
appointments of High Commissioners representing the
interests of Australia in such states;

- (c) the giving of agrément for, and the acceptance of credentials of, Ambassadors Extraordinary and Plenipotentiary to represent in Australia the interests of foreign states and High Commissioners to represent in Australia the interests of states within the Commonwealth of Nations but not included in Our Realms and Territories;
- (d) the withdrawal of recognition of Ambassadors Extraordinary and Plenipotentiary representing in Australia the interests of foreign states, and of High Commissioners representing in Australia the interests of states within the Commonwealth of Nations but not included in Our Realms and Territories;
- (e) the execution, issue and revocation, and the receipt and acceptance, of instruments for or in connection with any of the foregoing matters;
- (f) the appointment of persons to be Ministers Plenipotentiary, Counsellors, First Secretaries, Second Secretaries or Third Secretaries in the Diplomatic Service of Our Commonwealth of Australia, of Consul-Generals, Consuls or Vice-Consuls of Australia, the termination of appointments so made, the issue of Commissions or other instruments necessary for or in connection with appointments so made and, upon termination of the appointments, the revocation of the commissions or other instruments; and
- (g) the granting of Exequaturs in respect of foreign consular representatives in Australia and the withdrawal of Exequaturs so granted.

GIVEN at Our Court at

St. James's on
1 December 1987.

By Her Majesty's Command,

Prime Minister

Government House
Canberra
26 August 1988

It is hereby notified for general information that the Governor-General has awarded the Defence Force Service Medal, the Reserve Force Decoration, the Reserve Force Medal and Clasp where indicated, to the following Royal Australian Navy personnel.

ROYAL AUSTRALIAN NAVY

Defence Force Service Medal

R115328 ANDERSON, Kenneth Gordon
(*Petty Officer*)
S113323 ANDERSON, Paul David
